National Institute of Statistics of Rwanda (NISR), Labour Force Survey Trends, August 2022 report, October 2022

Foreword

Labour statistics play an essential role in the efforts of the country to achieve decent work for all. These statistics are needed for the development of policies towards this goal and for assessing progress towards decent work.

The government of Rwanda needs updated information for monitoring progress on programmes and policies as stipulated in the first National Strategy for Transformation (NST1), Sustainable Development Goals (SDGs) as well as vision 2050. To monitor progress towards these goals and targets, relevant, reliable, coherent, timely and accessible labour statistics have to be produced.

The National Institute of Statistics of Rwanda introduced the labour force survey (LFS) program to provide statistics users, mainly Ministry of Public Service and Labour, Ministry of Finance and Economic Planning, the Ministry of Education, International Labour Organization and other users, with needed labour statistics.

The ultimate goal of the Labour Force survey is to provide data on the structure and trends of labour force, employment and unemployment as well as other related labour market statistics for the implementation and evaluation of economic and social policies related to employment creation, income generation, skills development, and related decent work policies.

After the pilot survey that was conducted in February 2016, the first round of the survey was conducted in August 2016 and continued on bi-annual basis until August 2018. Since the year 2019, the survey was re-designed to provide estimates of the labour market aggregates on quarterly basis. Despite the effect of covid-19 on implementation of different activities, NISR in collaboration with different stakeholders managed to maintain the regularity in the production of quarterly LFS with some adjustments where necessary. Due to movement restrictions measures to avoid the spread of Covid-19 pandemic, telephone interviewing method was introduced for the data collection since May 2020 and was used in all rounds of LFS except for August 2020. The current findings are for quarter three of LFS_2022 that was conducted in August 2022.

NISR congratulates all those who contributed in one way or the other in this exercise. In particular, NISR expresses its gratitude to the survey coordinators, supervisors, interviewers, Analysts, and respondents for their valuable time that made this survey possible. The National Institute of Statistics of Rwanda invite policy makers, program managers, researchers and all users to play an important role in using the valuable data showcased in the LFS rounds to contribute to enhancing Rwandans' Economic development.

MURANGWA Yusuf
 Director General of NISR

Executive summary

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by the National Institute of Statistics of Rwanda (NISR). It collects data on the labour market activities of individuals aged 14 years and older who live in private households in Rwanda. For the reporting purpose, only persons aged 16 years and above are covered. In this report, the survey results are mainly compared for August 2021, November 2021, February 2022 and May 2022. However, some tables and graphs are presented with more data points including results of the previous labour force surveys results.

In August 2022 (Q3), the working age population (16 years and above) was around 8 million of whom 3,711,254 were employed; 819,936 were unemployed and 3,469,591 were out of labour force. The sum of employed and unemployed population results to population in labour force were 4,531,190 persons. The proportion of working age population who were in the labour force increased to 56.6 percent in August 2022 (Q3) compared to 54.3 percent in May 2022(Q2). The proportion of the working age population outside the labour force decreased to 43.4 percent in August 2022(Q3) as compared to 45.7 percent in May 2022(Q2) and 49.1 percent in August 2021(Q3) (One year back).

The share of subsistence agriculture in population outside labour force was 39.6 percent in August 2022(Q3). It has increased by 6.6 percentage points as compared to 33 percent observed in May 2022(Q2). The sum of employed population (3,711,254 persons) and subsistence agricultural without employment (1,647,804) gives the estimate number of workforce¹ in May 2022(Q2) equivalent to 5,488,064 persons. Therefore, in August 2022(Q3), the proportion of working age population engaged in employment or subsistence agriculture was 68.6 percent as compared to 62.5 percent observed in May 2022(Q2), and to 64.6 percent registered in August 2021(Q3).

The share of agricultural workers in total workforce (employed + subsistence agricultural) increased by around 6.1 percentage points from 62.5 percent in May 2022(Q2) to 68.6 percent in August 2022(Q3)

The employment-to-population ratio relatively increased to 46.4 percent in August 2022(Q3) as compared to 41.8 percent in May 2022 (Q2) and became higher than the one registered one year back in August 2021 (Q3) (41 percent). Labour force participation has increased (56.6 percent) in August 2022 (Q3) as compared to 54.3 percent of May 2022 (Q2).

Round to round comparison shows that the total employment increased by around 11.8 percent from 3.31 million in May 2022 (Q2) to 3.71 million of employed population in August 2022 (Q3). A comparison with the same quarter one year back shows that the total employment increased by 16.7 percent.

¹ This number exclude own-use production in unpaid services, unpaid trainees, and volunteer workers

In August 2022(Q3), about 238 thousand workers gained employment in agriculture sector, as compared to May 2022(Q2). About 199 thousand workers got employment in industry sector while 42 thousands of workers lost employment in Service sector.

In addition to the industry sector, the important gains of employment were observed in construction (+142,741workers) and manufacturing (+61,526); in services sector, the important loss of employment were observed in Wholesale, retail trade, repair of motor vehicles, motorcycles (-24,668.) and education (-21,133).

The August 2022(Q3) results revealed that the share of paid employees in the total employment decreased to 70.8 percent as compared to 71.8 percent in May 2022(Q2). The share of self-employed persons slightly decreased to 23.7 percent from 24.5 percent in May 2022(Q2). The comparison of August 2021(Q3) and August 2022(Q3) revealed that the share of paid employees and the share of self-employed persons remained stable.

In August 2022 (Q3), the unemployment rate decreased to 18.1 percent as compared to 23.0 percent recorded in May 2022(Q3) which is equivalent to a decrease of 4.9 percentage points. The unemployment rate slightly decreased compared to one year back (19.3 percent in August 2021 (Q3)). It remained relatively higher among females (21.4 percent) as compared to males (15.4 percent). It is also relatively higher among youth population aged 16 years to 30 years (22.6percent).

Labour underutilization rate which accounts for unemployment, time-related underemployment and potential labour force decreased to 58.3 percent in August 2022(Q3) from 60 percent in May 2022(Q2). It has decreased as compared to August 2021 (the figure observed one year back). The labour underutilization rate was remarkably higher among females (64.7 percent) as compared to males (52.2 percent).

Rwanda Labour force survey, August 2022(Q3) Summary labour force indicators

Working age population 16 years old and over 8,000,781 persons							
Outside the labour force (Not employed nor unemployed) 3,469,591 persons Out of LF rate:43.4%			Labour force (The sum of employed and unemployed) 4,531,190 persons Labour force participation rate 56.6%				
Subsistence agriculture	Exclusively students	Other outside LF (Elderly, disabled, discouraged job seekers...)	Employed (All who worked for pay or profit) 3,711,254 persons Employment to population ratio: 46.4%			Unemployed (All not employed but seeking and available to work for pay or profit) 819,936 persons Unemployment rate: 18.1%	
			Agriculture excluding subsistence foodstuff production	Industry	Services	Unemployed but engaged in subsistence agriculture	Other unemployed
39.6%	22.3%	38.1%	45.6%	20.5%	33.9%	49%	51%
Potential labour force 1,374,783		Other out of labour force 2,094,808	Time related underemployed 1,251,338	Other employed 2,459,916			
Labour underutilization (3,446,057 persons): Unemployed (819,936) + Time-related underemployed (1,251,338) + Potential labour force (1,374,783) Composite measure of labour underutilization (58.3 %)

Chapter 1: Introduction

The Rwanda Labour Force Survey (LFS) started in 2016 with an annual sample spread into two rounds to provide bi-annual estimates of main labour market indicators at National level. From February 2019, the sample was spread into four rounds to provide estimates of labour market indicators at national level on a quarterly basis.

Since 2020, there was a disturbance in the methodology and techniques of data production not only in Rwanda but also all over the World due to the covid-19 pandemic. The pandemic was identified for the first time in Rwanda in mid-March 2020 and different preventive measures including lockdowns were taken. Despite the pandemic, the labour force Survey continued to be conducted on a quarterly basis with some adjustments to cope with covid-19 prevention measures. It is in this context that NISR introduced the telephone interviews in May 2020(Q2). The same method of data collection was also used in August 2020(Q3), November 2020(Q4), and in all quarterly labour force Surveys conducted in 2021, February 2022(Q1), May 2022(Q2) as well as the present one conducted in August 2022 (Q3).

The main objective of the survey is to provide data on the structure and trends of labour force, employment and unemployment as well as other related labour market statistics for the implementation and evaluation of economic and social policies related to employment creation, income generation, skills development, and related decent work policies.

The current quarterly Labour Force survey is designed according to a two-stage stratified design with a rotation scheme. At the first stage of sampling, a stratified sample of 288 census enumeration areas, called primary sampling units (PSUs) are drawn from the 2012 census sampling frame with probabilities proportional to size measured in terms of number of households according to the latest census of population. The strata are composed of the 30 administrative districts of the country, sub-divided into urban and rural areas. At the second stage of sampling, 16 households were selected from each of sampled PSUs with equal probabilities, after a fresh listing of the households in the new sample PSUs. All household members in the sample are then selected for survey interview. At the end of the data collection, the response rate was evaluated to 90.6 percent, which is 0.2 percentage points lower than the previous quarter (90.8 percent).

In the present report, the results of August 2022(Q3) labour force survey are mainly compared with May 2022(Q2), February 2022(Q1), November 2021 (Q4) and August 2021 (Q3). However, in some sections, the tables or figures are presented with the additional time series including results of all quarters of the year from 2019 to 2022(Q3). This comparison allows tracking the change in labour market indicators over time and enabling to compare the labour market performance during the period of the covid-19 pandemic in Rwanda.

The resulting estimates of the main labour force indicators at the national level have standard errors of about 0.9 percent. The focus of the present report is the analysis of trends of employment and labour underutilization including unemployment at the

national level by selected demographic and socioeconomic characteristics such as sex, age group, educational attainment, etc.

The survey results analysed in this report are presented into seven chapters including this introduction. The other chapters cover the following: Trend of main indicators, labour force participation, employment, unemployment and labour underutilization, population outside labour force and work in agriculture.

Chapter 2: Trends of main indicators

The present chapter provides information on the trends of the main labour force indicators since February 2019. The different Labour Force survey rounds results are compared to have the time series of the main indicators such as Working age population, Labour force participation rate, Employed to population ratio, unemployment rate, and labour underutilisation rate.

2.1 Working age population

The labour force constituted 56.6 percent of the working age population in August 2022(Q3) (4,531,190 persons). It increased 5.1 percent and 14.8 percent as compared to May 2022(Q2) and the situation one year back (August 2021 (Q3)).

The August 2022(Q3) LFS results indicate that the population outside the labour force was 3,469,591. It decreased by 4.3 percent as compared to the previous quarter May 2022(Q2). Population in working age who were outside the labour force and involved in subsistence agriculture (Food producers) was estimated at 39.6 percent.

Students who are not involved in any economic activity make another important component of the population outside the labour force. Their number was estimated at 775,539 corresponding to 22.3 percent of the population outside the labour force. The proportion of students outside the labour force and not involved in any economic activity decreased by 4.8 percentage points from 27.1 percent in May 2022(Q2) due to the holidays as some students were involved in different economic activities.

The remainder of working age population outside the labour force consists of elderly persons, disables, discouraged jobs seekers, etc. Their total number was estimated at 1,318,820 in August 2022(Q3). It has decreased by 8.9 percent as compared to May 2022(Q2).

Figure 2. 1: Trend of the main component of the working age population (, 000s)

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

2.2 Labour force participation rate, employment to population ratio and unemployment rate

Figure 2.2 illustrates the trends of some of the key labour market indicators. In August 2022 (Q3), the unemployment rate decreased to 18.1 percent from 23 percent estimated in the previous round. In comparison with the situation one year earlier (August 2021 (Q3)); the current unemployment rate slightly declined by around 1.3 percentage points.

The employment-to-population ratio (EPR), i.e., the percentage of the working age population who is employed, is an indicator of the performance of the national economy in providing employment to its growing population. The analysis of employment trends shows that in August 2022(Q3), the estimated number of employed population was 3,711,254 persons while it was 3,317,268 persons in May 2022(Q2), expressing an increase of 11.8 percent.

The employment-to-population ratio increased to 46.4 percent in August 2022 (Q3) as compared to 41.8 percent in May 2022 (Q2). The recorded employment to population ratio in August 2022 (Q3) was higher than the one registered one-year earlier August 2021 (Q3) (41 percent).

According to the results of the LFS presented in Figure 2.2, the labour force participation rate increased to 56.6 percent in August 2022(Q3) as compared to 54.3 percent in May 2022 (Q2).

Figure 2. 2: Trend of the main labour force indicators

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

UR=Unemployment rate, EPR=Employment-to-population Ratio, LFPR=Labour Force Participation Rate

2.3 Population outside labour force

Figure 2.3 presents the trend of the proportion of the working age population who was outside the labour force according to different categories. The results show that the proportion of the working age population outside the labour force decreased to 43.4 percent in August 2022 (Q3) as compared to 45.7 percent observed in May 2022(Q2). Round to round comparison has shown that this rate decreased by 5.8 percentage points (49.1 percent, in August 2021(Q3)).

Among the components of population out of labour force; Available non-job seekers constituted a substantial category. In Rwanda, most of the population in this category are mainly subsistence farmers. The proportion of working age population falling in this category in August 2022(Q3) decreased by 3.7 percentage points compared to the estimate of year back August 2021 (Q3) while it remained almost stable as compared to May 2022 (Q2).

An important sub-category of the available non-job seekers is the discouraged jobseekers, i.e., those outside the labour force who did not “seek employment” for labour market-related reasons (past failure, to find a suitable job, lack of experience, qualifications or jobs matching the person’s skills, lack of jobs in the area, considered too young or too old by prospective employers). The proportion of discouraged jobseekers among the working age population remained almost stable, 11.6 percent in August 2022(Q3) as compared to 11 percent in May 2022(Q2). In comparison to the previous round on year back (August 2021(Q3)), it decreased by 2 percentage points.

Figure 2. 3: Trend of the ratio of population outside labour force to working age population

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)
 Note: Information on discouraged jobseekers were not collected in May 2020

2.4 Subsistence foodstuff production participation rate

In Rwanda, there is a substantial number of working age population who are involved in subsistence agriculture and consequently excluded from the count of the labour force according to the 2013 international standards on statistics of work, employment and labour underutilisation. The relatively low labour force participation reported in Figure 2.2 above reflects the relatively high share of subsistence foodstuff producers among population outside labour force.

Figure 2.4 presents the trend of the proportion of the working age population who were outside the labour force but engaged in production of foodstuff for own use but also make a comparison with those who are in Labour and employed in agriculture (market oriented agriculture). The rate of participation in subsistence foodstuff production increased to 17.2 percent in August 2022 (Q3) from 15.1 percent observed in May 2022(Q2). The comparison of estimate one year back (19.3 percent in August 2021(Q3)) indicates a decrease of 2.1 percentage points.

Figure 2. 4: Trend of subsistence foodstuff production participation rate

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

2.5 Labour underutilization rates

Labour underutilization consists of three components namely Unemployment, Time-related underemployment, and Potential labour force. The Labour Force Survey results provide four indicators of labour underutilization: the unemployment rate (LU1); the combined rate of unemployment and time-related underemployment (LU2); the combined rate of unemployment and potential labour force (LU3); and the composite measure of labour underutilization (LU4), defined as the ratio of the sum of people in time-related underemployment, in unemployment and in the potential labour force to the extended labour force defined as the sum of labour force and potential labour force.

The results presented in figure 2.5 compare the labour underutilisation rate and its components in different quarterly LFS series. The quarter-to-quarter comparison shows that all four indicators of labour underutilization decreased. The unemployment rate (LU1) decreased by 4.9 percentage points in August 2022 (Q3) as compared to May 2022(Q2), LU2 decreased by 2.3 percentage points, LU3 decreased by 3.8 and LU4 decreased by 1.7 percentage points. The comparison of August 2022(Q3) results with the results of the same month one-year back reveals that all the indicators had declined.

Figure 2. 5: Trend of the labour underutilization rate

LU2 - Combined rate of unemployment and time-related underemployment

LU3 - Combined rate of unemployment and potential labour force

LU4 - Composite measure of labour underutilization

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 3: Labour Force Participation

3.1 Labour force participation among males and females

The labour force participation rate, which is the ratio of the labour force to the working age population expressed in percentage terms, stood at 56.6 percent in August 2022(Q3) compared to 50.9 percent in August 2021(Q3). The results show an increasing rate of labour force participation rate among both male and female population as compared to previous rounds; however, the labour force participation rate was higher among male population than the female population over time.

Gender gap in labour force participation rate was around 17.2 percentage points in August 2021(Q3) and it remained stable, 17 percent in August 2022(Q3). The comparison with the quarter one year back shows that the labour force participation rate increased by 5.7 percentage points in August 2022(Q3) compared August 2021(Q3) at National level, 5.6 percentage points among male and 5.8 percentage points among female.

Figure 3. 1: Labour force participation rate by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.2 Labour force participation and education

The analysis of the labour force participation rate by educational attainment shows that it was higher among those with relatively higher levels of education compared to those with lower levels of education over time. A comparison of August 2021(Q3) with August 2022(Q3) shows an increase of labour force participation rate in almost all levels of education except among lower and upper secondary.

From May 2022(Q2) to August 2022(Q3), the remarkable change was observed in upper secondary and primary level of education where the labour force participation rate decreased by 6.1 percentage points and increased by 5.3 percentages points respectively. Labour force participation rate of population with no level of education, lower level of education and tertiary level of education increased by 1.9 percentage points, 1.8 percentage points and 2.1 percentage points respectively. The comparison of August 2022 (Q3) labour force participation with the data of one year back round (August 2021 (Q3)) shows that the rate had increased in all level of education.

Figure 3. 2: Labour force participation rate by level of education

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.3 Labour force participation by age group

In August 2022(Q3), the labour force participation rate among youth aged 16 to 30 years (52.9 percent) increased by 4.2 percentage points compared to May 2022(Q2). In the age group 31-54 years old, LFPR was 72.8 percent which is 1.9 percentage points more than the one observed in May 2022(Q2). For the age group 55 years old and above, the labour force participation rate in August 2022(Q3) slightly increased by 1.1 percentage points as compared to the previous quarter.

Generally, the age group 31-54 years has shown a high participation rate in the labour force.

Figure 3. 3: Labour force participation rate by age group

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.4 Labour force participation and area of residence

Labour force participation rate by area of residence (urban and rural) was revealed to be high in urban areas compared to rural areas. This may be attributed to the diversity of job opportunities in urban areas as compared to rural areas where the number of

employment opportunities is limited, and most people are involved in subsistence agriculture. The gap between the labour force participation rate in urban and rural areas slightly increased from 11.8 percentage points in August 2021(Q3) to 14 percentage points in August 2022(Q3).

The comparison of LFS August 2022(Q3) and May 2022(Q2) shows that the labour force participation rate in urban areas increased by 4.5 percentage points from 63.5 percent in May 2022(Q2) to 68 percent in August 2022(Q3) and increased by 2.3 percentage points in rural areas from 51.7 percent in May 2022(Q2) to 54 percent in August 2022(Q3).

Figure 3. 4: Labour force participation rate by area of residence

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 4: Employment

According to the recent international standards, persons of working age are classified as employed if, during a short reference period of 7 days or one week, (i) they did some work (even for just one hour) for profit or pay, in cash or in kind; or (ii) they were attached to a job or had an enterprise from which they were ‘temporarily’ absent during this period.

4.1 Employment to population ratio

Aggregate employment generally increases with growing population. Therefore, The EPR is a measure of the extent to which the economy is providing income-generating jobs for persons who are of working age. It thus gives an indication of the demand for labour in the economy, in terms of the quantity of workers. An increase in the employment-to-population ratio is often regarded as an indicator of economic acceleration and an increase in total employment as an indicator of economic stability. In August 2022 (Q3), the Employment-to-population ratio was 46.4 percent. It was observed that the employment-to-population ratio increased in August 2022(Q3) as compared to May 2022(Q2) at the national level as well as in both urban and rural areas. The results show that between May 2022(Q2) and August 2022 (Q3), the employment-to-population ratio increased by 4.6 percentage points at national level, by 6.6 percentage points in urban areas, and by 4.5 percentage points in rural areas.

It was observed that the employment-to-population ratio was higher in urban areas as compared to rural areas in all rounds of the labour force survey. The gap between the employment-to-population ratio between urban and rural areas remained significant in August 2022(Q2) (12.1 percentage points).

Figure 4. 1: Employment to population ratio (EPR) by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 4.2 shows the trend in the employment-to-population ratio for the male and female separately. It is informative to note that there is a high gap between the employment-to-population ratio of males and females over time. In August 2022 (Q3), the employment-to-population ratio has increased among both females (5.4 percentage points) and males (3.8 percentage points) as compared to May 2022 (Q2). The gender gap in employment to population ratio in August 2022 (Q3), remained significant (17.3 percentage points) at the National level. A comparison between the current quarter and

the same quarter one year back (August 2021(Q3)), shows that, the employment to population ratio increased by about 5.4 percent at National level.

4.2 Status in employment

The results in Table 4.1 below reveal that, in August 2022 (Q3) the number of employed population increased by around 14.3 percent as compared to August 2021 (Q3) and by around 10.6 percent as compared to May 2022(Q2). It is observed that the category of employees and paid apprentices recorded the highest share of employment across all rounds of the labour force survey followed by own-account workers, contributing family workers, employers, and member of cooperatives. In August 2022 (Q3), the number of employees and paid apprentices and the one of own account workers also increased as compared to August 2021(Q3), but the number of employers declined by 13.5 percentage points as compared to the previous round.

Table 4. 1: Distribution of employed population by status in employment

Status in employment	21-Aug	21-Nov	22-Feb	22-May	22-Aug	% Change	% Change
						(Aug21 - Aug22)	(Aug22 - May22)
Total	3,179,124	3,633,132	3,585,651	3,317,006	3,711,254	14.3%	10.6%
Employee and paid apprentices	2,247,771	2,714,127	2,696,389	2,382,596	2,630,327	14.5%	9.4%
Employer (with regular employees)	40,061	28,451	56,647	43,979	38,754	-3.4%	-13.5%
Own account worker (without regular employees)	765,892	815,543	769,418	812,760	879,256	12.9%	7.6%
Member of cooperative	5,658	1,637	1,013	591	5,559	-1.8%	89.4%
Contributing family worker	119,741	73,375	62,183	77,080	157,357	23.9%	51.0%

Figure 4.3 shows the distribution of employed population according to the status of employment. It reveals that the share of employees in August 2022 (Q3) was 70.9 percent, 23.7 percent for Own account workers and 1 percent was Employers. Compare with May

2022 (Q2), the share of employees increased by 9.4 percentage points and by 7.6 percentage points among own-account workers while declined among employers (13.5 percentage points).

4.3 Main occupation

The table below presents the number of employed persons by occupation and its change over time. The comparison of Aug 2022 (Q3) with Aug 2021(Q3) reveals that there was an important loss of employment in two occupation groups: Plant and machine (-6.6 percent), and Service and sales workers (-1.9 percent). The following occupation groups recorded a gain in employment: Clerical support workers (+52.9 percent), Craft and related Trade (+34.4 percent), Skilled agricultural forestry and fishing (+21.5 percent), Professionals (+20.6 percent), Managers (18.2 percent) and Elementary occupation (+18.6 percent).

Table 4. 2 Number of employed persons by occupation

Major Occupation Group	21-Aug	21-Nov	22-Feb	22-May	22-Aug	% Change Aug-21-Aug-22
Total	3,179,124	3,633,132	3,585,651	3,317,006	3,711,254	16.7%
Managers	32,354	31,124	44,042	27,768	38,243	18.2%
Professionals	179,092	238,827	211,286	242,418	215,991	20.6%
Technicians and associate professionals	41,276	57,546	24,767	41,997	46,745	13.2%
Clerical support workers	24,793	39,742	24,286	29,125	37,910	52.9%
Service and sales workers	477,936	508,960	507,256	476,022	468,663	-1.9%

Elementary occupations	1,859,068	2,254,034	2,261,175	1,993,084	2,205,559	18.6%

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The percentage distribution of employed population by occupational categories across selected rounds of the Labour Force Survey as presented in table 4.3 below shows that Elementary Occupations (59.4 percent) usually registered a highest share followed by Service and Sales Workers (12.6 percent) and then Craft and Related Trades Workers (10.0 percent) among others. The result of comparison of Aug 2022 (Q3) with the same quarter in 2021 showed that the distribution has remained relatively unchanged except among Service and sales workers where a decline of 2.4 was observed.

4.4 Main Economic activity

According to the results presented in Table 4.4 below, the bulk of employed population were engaged in Agriculture, forestry and fishing (42.6 percent) in August 2022(Q3). Other sectors that employed a substantial number of population were wholesale and retail trade; repair of motor vehicles and motorcycles (13.0 percent), construction (10.6 percent), Manufacturing (5.7 percent), Activities of households as employers (5.2 percent) and Education (3.6 percent).

The number of employed populations increased by about 394,701 persons in August 2022 (Q3) as compared to the previous quarter (May 2022(Q2)). The sectors that had a high gain of the number of workers in absolute terms are Agriculture and forestry (+238,667 workers); Construction (+142,741) and Manufacturing (+61,526). On the other hand, the following sectors lost a considerable number of workers from May 2022(Q2) to August 2022 (Q3) as compared to other sectors: Wholesale and retail trade; repair of motor vehicles and motorcycles (-24,669), Education² sector (-21,134) and Transport and storage sector (-11,320 workers).

There has been an increase in the number of employed populations in fifteen main economic activities in August 2022 (Q3) as compared to August 2021(Q3). Among them,

² This may be explained by teachers who in holidays are performing any other job which is not in the education sector.

those that gained a relatively higher number of employed persons were Agriculture (+271,759) Manufacturing (+62,840), Transport and storage sector (+52,901), Construction (+33,558 workers), Accommodation (37,729) and Activity of household as employer (+29,902 workers). On the other hand, some sector has lost a substantial number of employed persons; We can mention Wholesale and retail trade; repair of motor vehicles and motor cycles (-22,851 workers).

4.5 Actual hours worked (main and secondary jobs) per person in the working age population

The concept of working time used in the Labour force survey is that of Hours actually worked. This is defined as the time spent in a job for the performance of activities that contribute to the production of goods and/or services during a specified short or long reference period (Last seven days). It covers time spent directly on and in relation to productive activities, as well as down time and resting time. Hours actually worked excludes time not worked, such as annual and sick leave, public holidays, parental leave, commuting time, educational activities and longer pauses, for example lunch breaks³. The following section discusses the hours of work as indicators (hours worked per person in the working population, working-hour losses/gain). It can be visually observed that the average number of hours worked per person in working age rose to 13.8 in August 2022(Q3) from 12.6 in May 2022(Q2). Men are likely to work many hours as compared to female.

Figure 4. 4: Actual hours worked (main and secondary jobs) per person in the working population by sex

³ ILO: Resolution concerning the measurement of working time, adopted by the Eighteenth International Conference of Labour Statisticians: http://www.ilo.org/wcmsp5/groups/public/---dgreports/---stat/documents/normativeinstrument/wcms_112455.pdf

The Table 4.6 below also shows that Weekly actual working hours during the reference period in the current quarter generally increased as compared to total hours actually worked in August 2021(Q3). The gain of working hours has been observed in both male and female workers as well as in both urban and rural areas. A comparison of the average of the weekly hours actually worked between the current round and August 2021(Q3), shows a gain of 23.0 percent in total hours actually worked. A considerable gain in total hours worked was observed among female population (27.0 percent), the population living in urban areas (24.8 percent) as well as among youth population age 16-30 years old (24.1 percent).

Table 4. 6: Actual working hour's losses (main and secondary jobs)

	21-Aug	21-May	22-Feb	22-May	22-Aug	Gain/loss Aug 21- Aug 22

Chapter 5: Unemployment and Labour Underutilization

Unemployment is a particular form of labour underutilization. It reflects the pressure on the labour market. It is measured in terms of the number of persons without employment, actively seeking and available for employment. Labour underutilization is a more general concept. It refers to mismatches between labour supply and demand, which translate into an unmet need for employment among the population. Labour underutilization includes unemployment, time-related underemployment, and the potential labour force referring to population not in employment who express an interest in this form of work, but for whom existing conditions limit their active job search or their availability for employment.

5.1 Unemployment rate

The unemployment rate is defined as the ratio of the number of unemployed persons to the labour force. It is the most used indicator of the labour market. It is sometimes used in a general sense as an indicator of the health of the economy, not just the labour market.

According to the Labour Force Survey results of August 2022(Q3), the unemployment rate in Rwanda stood at 18.1 and has slightly declined as compared with the one recorded one year back 19.4 percent (August 2021). Comparing to the previous round, this rate declined by 4.9 percentage points from 23.0 percent in May 2022(Q2). Comparing to the previous round, the highest increase was observed among females (5.2 percentage points) compared to males (4.6 percentage points). It should be noted that the decline in unemployment rate in the current round may be explained by a high number of populations who were employed in construction, manufacturing and by a considerable number who joined employment from subsistence agriculture to market oriented agriculture due to the effect of seasonality. It is instructive to note that before the pandemic, in February 2020 (Q1), the unemployment rate was 13.1 percent at national level. The unemployment has shown the up and down trends due to seasonality in labour force status. By the time of low economic activity, the unemployment tends to increase and vice versa.

Figure 5. 1: Unemployment rate by sex.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The survey results of August 2022(Q3) reveals that the unemployment rate was higher among the population living in rural areas as compared to those living in urban areas of

Rwanda (18.3 percent and 17.3 percent respectively). A comparison of results of the current quarter and the previous quarter shows that the unemployment rate declined by 4.6 percentage points in urban areas and by 5.1 percentage points in rural areas. The comparison with August 2021(Q3), one year back, shows that unemployment slightly declined by one percent among both population living in urban and rural areas of Rwanda.

Figure 5. 2: Unemployment rate by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 5.3 shows the trend in the unemployment rate among youth and adults population. In Rwanda, the youth population is defined as persons with 16 to 30 years of age. The results show that the unemployment rate among the youth has been relatively higher than the unemployment rate among adults over time. The unemployment rate among the youth (16-30 years) has declined from 28.4 percent in May 2022 (Q2) to 22.6 percent in August 2022(Q3) while the unemployment rate among adults' population (31+ years) has declined from 19.4 percent to 15.0 percent in the same period. A comparison of the current survey results with the ones obtained one year back (August 2021) shows that the unemployment rate declined among youth population (-2.9 percent) and remained relatively stable among adults.

Figure 5. 3: Unemployment rate among youth and Adult

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The figure 5.4 below shows the trend of unemployment rate among selected age groups. It can be observed that unemployment has declined in all selected age groups throughout the third quarter of the year 2022. In August 2022(Q3) the highest unemployment rate was observed among those aged 16 to 24 years old (24.4 percent), while the lowest rate was among those aged 45 years and above (14.8 percent). The comparison between May 2022(Q2) and August 2022(Q3) shows that the rate declined by 5.8 percentage points among young aged 16-24 years old, 5.6 percentage points among those aged 24-44 years old and by 2.5 percentage points among those aged 45 years old and above.

Figure 5. 4: Unemployment rate by selected age groups

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

5.2 Youth Not in Employment, Education or Training (NEET)

Participation in employment, education or training is important for youth in their transition to the labour market and achieves self-sufficiency. To examine this issue, two age groups (16 to 24 years old) and (16 to 30 years old) are separately used in presenting the results in table 5.1. The full count of young population in the age group 16 to 24 years old, who were neither in employment nor in education or training was 760,243 persons

while for those aged between 16 and 30 years old, was 1,160,448 persons in August 2022(Q3).

The share of young (16 to 24 years old) neither in employment nor in education or training (NEET) stood at 32.9percent in August 2022(Q3) representing a decline of 3.3 percentage points as compared to May 2022(Q2) (36.2 percent). Quarter to quarter comparison shows a significant decline in the rate of young NEET (aged 16-24) among females (3.8 percentage points) and 2.7 percentage points among males. The decline was 8.6 percentage points among those living in urban areas and slightly declined (2.3 percentage points) among the young population living in rural areas.

The survey results also shows that the NEET rate among youth (16-30 years) was 30.7 percent in August 2022(Q3) with higher rate among females (32.2 percent) than among males (29.1 percent). As regard to the area of residence, the higher rate was observed higher in rural areas (33.8 percent) than in urban areas (18.0 percent). The comparison of the current NEET rate with the results of the previous quarter shows that the NEET rate declined by 3.2 percentage points at national level, by 2.5 percentage points among youth population living in rural and by 7 percentage points among population living in urban areas of Rwanda. It declined by 4 percentage points among females and by 2.4 percentage points among males.

Table 5. 1: Share of youth Not in Employment, Education or Training (NEET) by sex and area of residence

5.3. Labour Underutilization

Labour underutilization includes unemployment, time-related underemployment, and potential labour force. Time-related underemployment refers to the situation when the working time of persons in employment is insufficient in relation to alternative employment situations in which they are willing and available to engage. Potential labour force is defined as all persons of working age outside the labour force who, during the reference period, were neither in employment nor in unemployment but who were considered as either (a) *unavailable jobseekers* (seeking employment but not currently available) or (b) *available potential jobseekers* (currently available for employment but did not carry out activities to seek employment).

The results presented in figure 5.5 shows that the composite measure of labour underutilization rate was 58.3 percent in August 2022(Q3) slightly declined by 1.7 percentage points as compared to 60.0 percent recorded in May 2022(Q2). The labour underutilization rate was higher among females (64.7 percent) than males (52.2 percent). The comparison of the results in August 2022(Q3) and August 2021(Q3) shows that the labour underutilization rate slightly declined at National level as well as among both males and females' population.

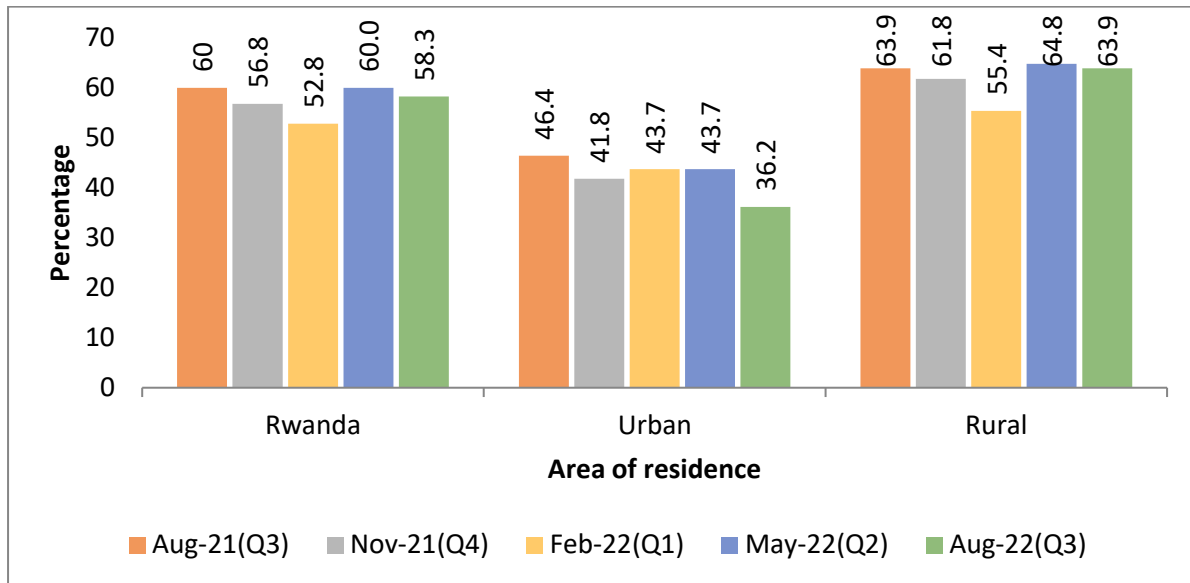

Figure 5. 5: Labour under-utilization rate by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey Series

The results presented in figure 5.6 below shows also that the labour under-utilization rate was higher among the population living in rural than those living in urban areas of Rwanda. The comparison of August 2022(Q3) and May 2022(Q2) reveals that the labour underutilization declined among the population living urban areas of Rwanda by 7.5 percentage points but slightly declined among population living in rural areas. A comparison of the labour underutilization rate in the current quarter with the situation of the same quarter one year back reveals that the labour underutilisation decreased by 10.2 percentage points in urban areas of Rwanda and remained relatively the same in rural areas.

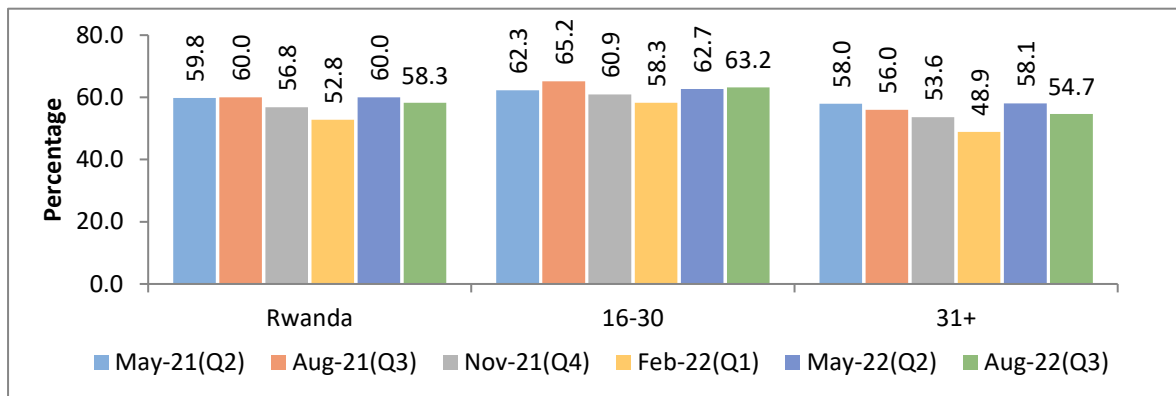

Figure 5. 6: Labour under-utilization rate by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 5.7 presents the results of the labour underutilization rate by age group (youth and adults). It is observed that the labour underutilization rate declined by 3.4 percentage points among adult population from 52.3 percent in May 2022(Q2) to 54.7 percent in August 2022(Q3) and remained stable among the youth’s population. Labour underutilization is showing a declining trend as compared to the previous rounds.

Figure 5. 7: Trend in labour underutilization rate by Youth and Adult.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The survey results presented in figure 5.8 below, reveals that the labour underutilisation rate was higher among population in lower age group than among adult population. In August 2022(Q3), the labour underutilization rate was 66.1 percent among youth in age group 16-24, 55.8 percent among population aged 25-44 years and 55.1 percent among those in age group 45 and above.

A comparison between August 2022(Q3) and May 2022(Q2) revealed that the labour underutilisation rate declined by 5.8 percentage points among those aged 45 years and above, by 1.3 among those aged 25-44 years old and remained relatively unchanged among population aged 45 years and above.

Figure 5. 8: Trend in labour underutilization rate by selected age group

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 6: Population outside the Labour Force

The population outside the labour force constitutes a large part of the working age population. It includes population engaged exclusively in activities for producing goods or services such as subsistence production of goods, own use production of services, volunteer production of goods or services and unpaid trainee or apprentice work, who have not carried out any activity for pay or profit during the reference period. It also includes students who are enrolled in schools, persons who currently do not seek for employment opportunities (not job seekers) such as discouraged job seekers. A particular characteristic of countries with large subsistence foodstuff production is the fact that the size of the working age population outside the labour force may be larger than the size of the labour force itself.

The population outside the labour force declined to around 3,469,591 in August 2022(Q3) from 3,627,294 in May 2022(Q2) which is equivalent to a decline of 4.3 percent as compared to the previous round. The comparison of the population outside labour force in August 2021(Q3) and August 2022(Q3) reveals also that they have been a decline of 8.8 percent.

6.1 Main components of population outside the labour Force

The population outside labour force can be divided into three important components, namely, students, persons involved in subsistence agriculture and other outside labour force including largely population who are available to work but do not do anything to search for a job, retired persons, people unable to work because of illness or disability.

Table 6.1 presents the main components of population outside the labour force. The population outside the labour force who was engaged in subsistence agriculture represented 39.6 percent in August 2022 (Q3). Those who were exclusively classified as students represented 22.4 percent while the remaining part represented 38.0 percent. The comparison with the previous quarter reveals reliable changes in both magnitude and distribution of the population outside labour force. The share of students decreased by 4.7 percentage points, the share of subsistence agriculture increased by 6.6 percentage point, while the share of other outside labour force decreased by 1.9 percentage points.

Table 6. 1: Main components of Persons outside the labour force

Main components	LFS rounds					% May-22 (Q2) to Aug-22(Q3)
	Aug-21 (Q3)	Nov-21 (Q4)	Feb-22(Q1)	May-22(Q2)	Aug-22 (Q3)	
% Main components						
Count(,000)	3,806	3044	3,580	3,627	3,470	
Total	100	100	100	100	100	100

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.2 Population outside the labour force by area of residence

The results in figure 6.1 below are about the percentage of population outside labour force as proportion of working age population at national level and in both urban and rural separately.

The comparison of May 2022 (Q2) and August 2022(Q3) reveals that there was a slight decline in the proportion of the population outside labour force at the National level (-2.3 percentage points), and a decline of 4.5 and 2.3 and percentage points in urban and rural areas, respectively. The comparison of August 2021 (Q3) and August 2022 (Q3) shows that the proportion of population outside labour force decreased by 6 percentage points at the national level, by 7.8 percentage points in urban areas and by 5.6 percentage points in rural areas

It is also observed from Figure 6.1 that the proportion of population outside labour force is normally higher in rural areas relatively to urban areas. In August 2022(Q3), the urban-rural gap increased to 14 compared to 11.8 percentage points observed in May 2022(Q3)

Figure 6. 1: Population outside Labour force by Area of residence

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.3 Population outside the labour force by age group

Figure 6.2 shows that the proportion of population outside labour force among youth (16-30 years old) declined from 53.1 percent in August 2021 (Q3) to 47.1 percent in August 2022(Q3) and decreased from 45.8 percent to 40.4 percent among adult (31 years and above), in the same period. The comparison of May 2022(Q2) with August 2022(Q3) illustrates that the proportion of population out of Labour force remained almost the same among youth and adults.

Figure 6. 2: Population outside the Labour force by Age category

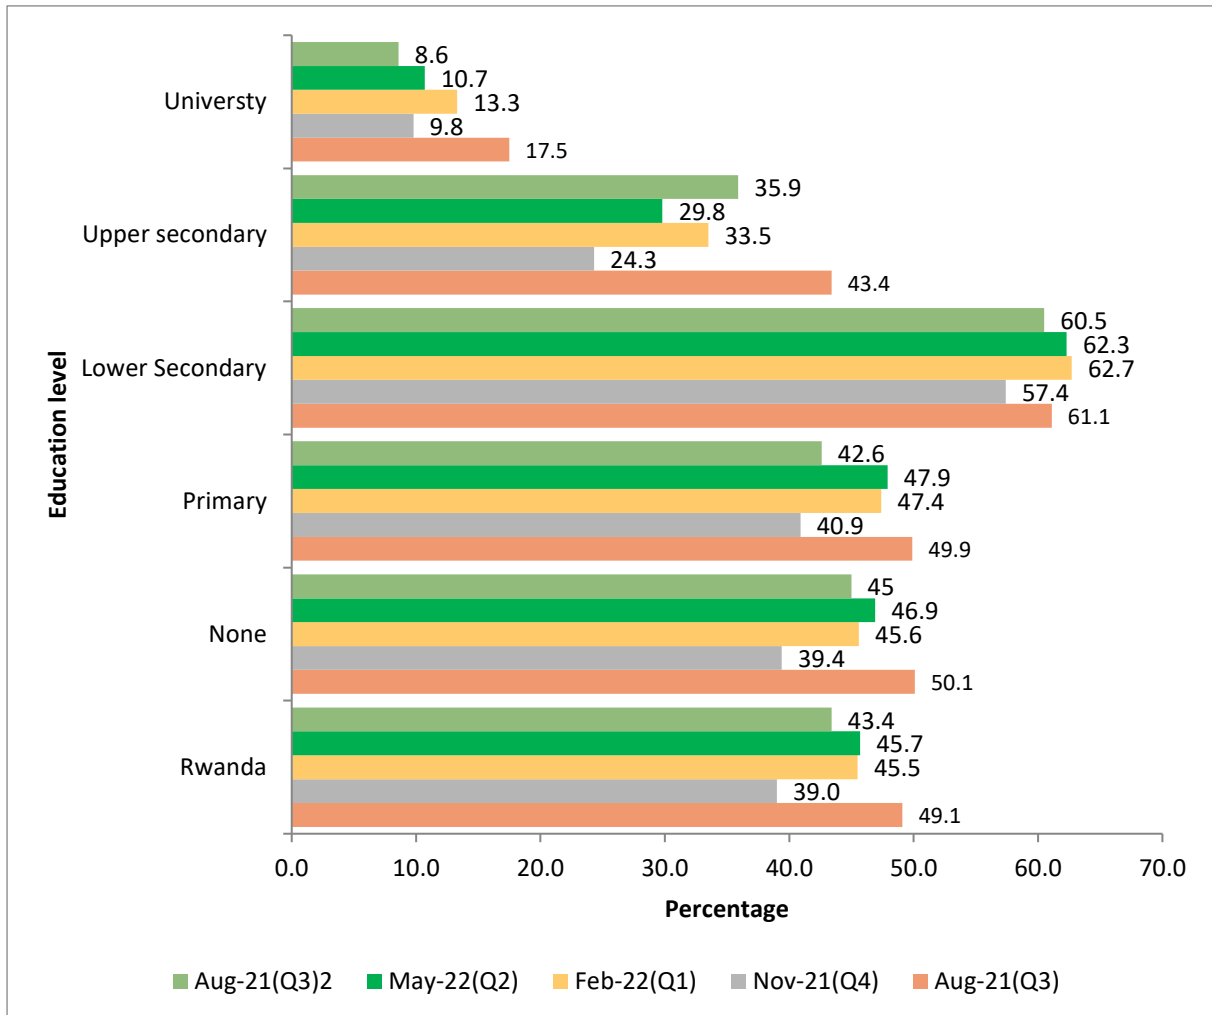

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.4 Population outside the labour force by level of educational attainment

The survey results revealed that the share of population outside the labour force in the working age population was lower among population who hold higher educational attainment as compared to those with lower education levels. From May 2022(Q2) to August 2022 (Q3), the proportion of working age population outside the labour force decreased 2.3 at National level and in all education level. It has declined by 5.3 and 2.1 percentage points among holders of primary and university level of education attainment respectively, 1.9 percentage points among those with no level of education, 1.8 percentage points among holders of lower secondary level of education while it increased by 6.1 percentage points among population with upper secondary education. The level of education is negatively related with the proportion of population outside labour force, the higher is education level, the lower is the proportion outside Labour Force, an exception may be observed among population with lower secondary education since the bulk of them still students. A comparison to the previous round of the Labour Force

survey shows that the proportion of population outside the Labour force declined as compared with May 2022(Q2).

Figure 6. 3: Population outside the Labour force by Education level attained

Chapter 7: Work in agriculture

Due to the importance of the agriculture sector in the economy of Rwanda, a special attention has been paid to it in the present report. The introduction of 2013 standards on work, employment and labour underutilization statistics split workers in agriculture occupation into two parts: market oriented and non-market oriented. Workers in the former part are considered as employed while those in latter are not counted as employed. In this report, all parts are brought together to analyse the work in agriculture sector.

7.1 Agricultural status of workers

Workers engaged in the agriculture sector may be subdivided into four parts: (a) those who were engaged in market-oriented agriculture as main job, working for pay or self-employed; (b) those who were exclusively engaged in subsistence agriculture; (c) those who had the main job outside agriculture but performed foodstuff production activities for own use; and finally, (d) those who were involved in market-oriented agriculture as their secondary job.

The full count of workers in agriculture sector (Market oriented in agriculture + Subsistence agriculture) as presented in table 7.1 revealed that in August 2022 (Q3), 48.8 percent of working age population were involved in agriculture activity. It was increased as compared to May 2022(Q2) (43.9 percent).

The proportion of agricultural persons in market-oriented agriculture slightly increased by 1.6 percentage points as compared to the previous quarter (May 2022(Q2)) while the proportion of agricultural workers exclusively in subsistence agriculture declined by 1.8 percentage points.

Table 7. 1: Works status in agriculture

Categories of agriculture	Aug-21(Q3)	Nov-21(Q4)	Feb-22(Q1)	May-22(Q2)	Aug-21(Q3)
Market oriented agriculture as main job (a)	39.6	46.3	45.5	41.7	43.3
Subsistence agriculture exclusively (b)	51	42.6	45.5	47.3	45.5
Participated in Subsistence agriculture but have non-agriculture main job (c)	9.1	11	8.6	11.1	11.1
Market oriented agriculture as secondary job (d)	0.3	0.1	0.4	0	0.1
Total (100%)	100	100	100	100	100
Count ('000s)	3,584	3,679	4,133	3,486	3,906
Proportion of working age population	46.2	47.1	52.5	43.9	48.8

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

Note: The proportion computed here is subject to the agriculture workers not to the employed population.

7.2 Characteristics of agricultural workers

The focus of the following sections is on the two first categories of table 7.1 (Workers in market oriented agricultural in main job and those involved exclusively in subsistence agriculture).

The results reveal that the bulk of agricultural workers were involved in subsistence agriculture with the same predominance among females and males.

In August 2022(Q3), the share of population engaged in subsistence agriculture among agricultural workers was 51.2 percent and it declined by 2 percentage points as compared to May 2022(Q2) where this proportion was at 53.2 percent. The proportion of males engaged in market-oriented agriculture was 49.1 Percent in August 2022(Q3), it was greater than the corresponding proportion of females involved in the same activity (43.9 percent). Conversely, the proportion of females engaged in subsistence agriculture was higher than the corresponding proportion of males (56.1 percent and 50.9 percent, respectively).

Table 7. 2: Trend of proportion of agricultural workers by sex.

		LFS rounds					% Change Feb-22(Q1) to May- 22(Q2)
		Aug- 21(Q3)	Nov- 21(Q4)	Feb- 22(Q1)	May- 22(Q2)	Aug- 22(Q3)

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

Table 7.3 below presents the trend of the share of market oriented and subsistence agricultural workers among young and adult’s persons separately. The share of adults population engaged in subsistence agriculture was slightly higher than the share of youth population in the same activity (52.6 percent and 48.4 percent respectively) in August 2022(Q3). The share of subsistence agriculture among youth remained unchanged from May 2022(Q2) to August 2022 (Q3) and decreased by 2.6 percentage points among adults population.

Table 7. 3: Trend of proportion of agricultural workers by age group

		LFS rounds					Change May- 22(Q1) to Aug- 22(Q2)
		Aug-21 (Q3)	Nov- 21(Q4)	Feb- 22(Q1)	May- 22(Q2)	Aug-22 (Q3)

The distribution of agricultural workers by education attainment, presented in table 7.4 shows that the higher the level of educational attainment, the lower the likelihood of participation in agricultural activities for both market-oriented and subsistence agriculture.

Table 7. 4: Trend of proportion of agricultural workers by level of education attainment

7.5 Share of agriculture in the total work force

The total work force can be defined as the sum of total employment (Paid/Profit or cash oriented) and the total number of workers engaged in subsistence agriculture. Thus, the share of agriculture workers in the total work force is the proportion of agriculture workers in the total workforce.

The results presented in figure 7.1 below shows that the share of agricultural workers in the work force was 63.2 percent in August 2022(Q3). It slightly increased by 8 percentage points as compared to May 2022(Q2). This share has remained unchanged among females and has increased among males (1.7 percentage points). The proportion of female workers involved in agricultural activities in August 2022(Q3) (73.3 percent) is far higher than the one for male workers involved in the same activities (53.1 percent). Compared to August 2021(Q3), there was an increase in proportion of 1.6 percentage points at national level, and 1.7 percentage points among males in total workforce.

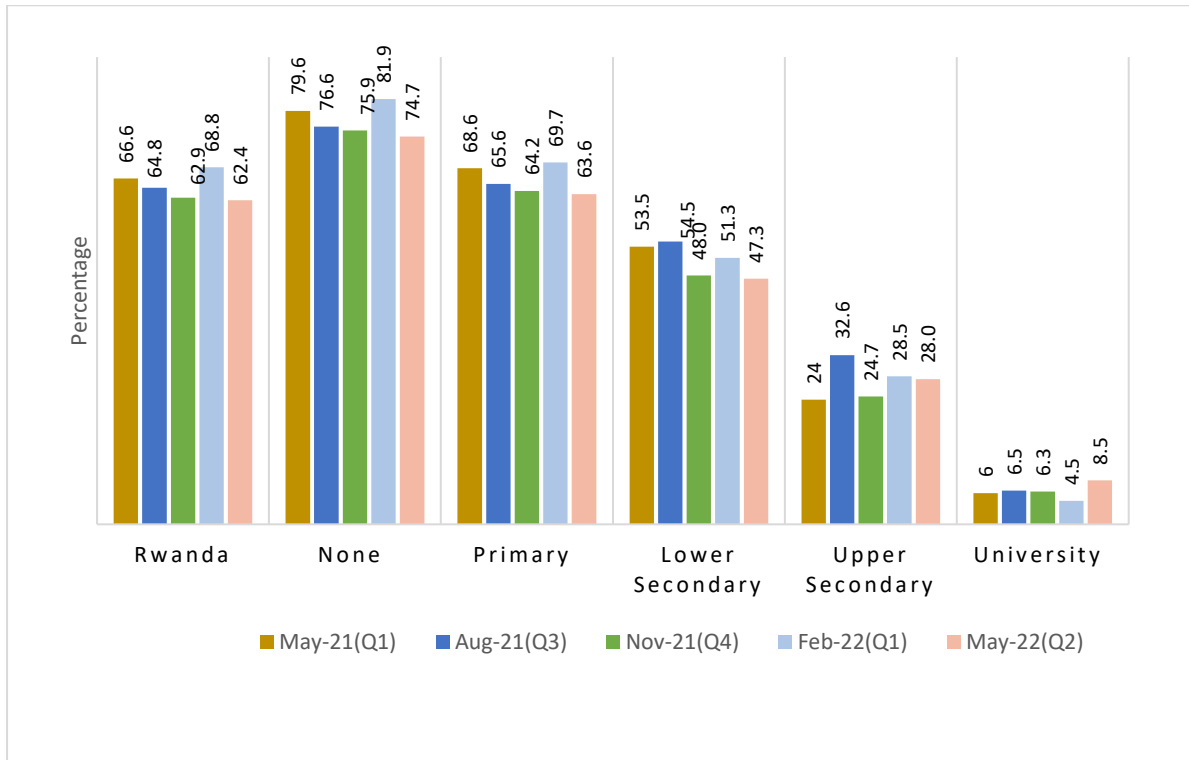

Figure 7. 1: Share of workers in agriculture by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

The share of agriculture workers in total workforce is inversely correlated with the level of education attainment. Persons with lower level of educational attainment are more likely to join agricultural work as compared to others with higher level of education. The result reveals a declining trend of the share of agriculture workers in all levels of education apart from university as compared to previous quarter.

Figure 7. 2: Share of workers in agriculture by level of education attained

Appendix A: Survey Methodology and Data quality

The current quarterly labour force survey is designed according to a two-stage stratified design with a rotation scheme. At the first stage of sampling, a stratified sample of 288 census enumeration areas, called primary sampling units (PSUs), is drawn from the 2012 census sample frame with probabilities proportional to size (pps) measured in terms of number of households according to the latest census of population.

The strata are composed of the 30 administrative districts of the country, sub-divided into urban and rural areas. At the second stage of sampling; 16 households were selected in all PSUs, with equal probabilities after a fresh listing of the households in the new sample PSUs. Thereafter, all household members in the sample are then selected for survey interview.

The sample size in the current quarter is about 4,608 households, composed of three rotation groups marked with the symbol r in the table. The proposed rotation design is 1-1-1, that is each sample household is interviewed three times, once every two quarters. Accordingly, a sample household is in the sample in one quarter, leaves the sample in the next quarter, returns in the sample in the following quarter, leaves again the sample in the subsequent quarter, and finally returns in the sample for the third time before leaving the sample altogether.

- **Sample weights**

Three steps were involved in the calculation of the sample weights: Calculation of the design weight, Adjustment for non-response; and Calibration to known population projections.

The design weight of a given sample household is the inverse of the probability of selection of a sample household. This probability is calculated as the product of two probabilities. The first is the probability of selection of the enumeration area k where the sample household is residing,

$$p_k = \eta \times N_k$$

Where N_k is the number of households in the enumeration area according to the sampling frame and η is the proportionality factor of the pps-sampling scheme.

The second is the probability of selection of the sample household within the enumeration area k .

$$p(hh_k) = \frac{16}{N_k^1}$$

Where 16 or 24 is the fixed sample-take in enumeration area k and N_k is the listed or estimated number of households in the enumeration area k .

The designed sampling weights for the quarterly Labour Force Survey are labelled “Qweight”. They are calculated as a function of the weights calculated earlier for the bi-

annual survey, called here “Oldweight”. The Qweight is obtained from the Oldweight as follows:

$$Qweight = Oldweight \times \frac{3}{4} \times \frac{1}{\frac{144}{146}} \times \frac{1}{\frac{1}{3}} = Oldweight \times \frac{219}{96}$$

The old design calculated as,

$$DesignWeight(hh_k) = d_k = \frac{1}{p_k} \times \frac{1}{p(hh_k)}$$

The overall weight of the quarterly LFS, d_k , is calculated as

$$Qweight = d_x = \frac{1}{p_k} + \frac{1}{p^{(hh_k)}} \times \frac{219}{96}$$

The non-response adjusted weight is then obtained by the dividing the design weight with the response rate,

$$AdjustedWeight(hh_k) = d_k = \frac{d_k}{r_k}$$

Where the response rate in enumeration area k is the percentage number of responding households among the total eligible households in the sample enumeration area.

Finally, the adjusted weights were calibrated to known population projections for four demographic groups: Males and females under 16 years old, and males and females aged 16 years old and above

The population projections were derived from the NISR census publication.⁴ The projections were adjusted by deducting estimated values for the institutional population not living in private households. The calibration procedure followed the methodology of Deville and Sarndäl.⁵ Accordingly, the final calibrated weights were obtained from the formula,

$$CalibratedWeight(hh_k) = w_k = d'_k \times (1 + \lambda x'_k)$$

- **Data quality**

Like in all sample surveys, the results of the LFS May 2022(Q2) are subject to sampling and different forms of measurement errors. This section provides information on sampling errors.

⁴ National Institute of Statistics of Rwanda, *Fourth Population and Housing Census, Rwanda, 2012, Thematic Report Population Projections*, January 2014.

⁵ Deville, J.C., and Sarndäl, C.E., “Calibration Estimators in Survey Sampling,” *Journal of the American Statistical Association*, Vol. 87, 1992, pp. 376-382.

- **Sampling errors**

Sampling errors arise because the survey did not cover all elements of the population, but only a selected portion. The sampling error of an estimate is calculated based on the difference between the estimate and the value that would have been obtained based on a complete count of the population under otherwise identical conditions.

The table A.1 below gives the sampling errors of the main labour force estimates obtained from the LFS August 2022(Q3) . They have been calculated based on the general principle that in multi-stage sample designs the variance contributed by the later stages of sampling is, under broad conditions, reflected in the observed variation among the sample results for first-stage units. Thus, the sampling variance of a variety of statistics, such as totals, means, ratios, proportions, and their differences can be obtained on the basis of totals calculated for the primary sampling units, here the localities⁶. The calculations took into account the fact that the sampling weights were calibrated and used the residual method proposed by Deville and Sarndäl p. 380.

Table A. 1: Sampling errors of estimates of main Labour force aggregates

	Estimate	Std. error	Relative Standard error	96%CI lower bound	96%CI upper bound
Population 16+ yrs	8,000,781	274,700	3.4%	7,451,400	8,550,200
Employment	3,711,254	153,300	4.1%	3,404,700	4,017,900
Unemployment	819,936	43,100	5.3%	733,700	906,100
Labour force	4,531,190	173,500	3.8%	4,184,200	4,878,200
Outside labour force	3,469,591	144,400	4.2%	3,180,800	3,758,400

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS), August 2022(Q3)

As an illustration of the use of the table, consider the fourth row of the table on the labour force. The total labour force is 4,531,190 estimated with a relative standard error of 3.8 percent. The true value at 95 percent confidence level lies within the interval 4,184,200 and 4,878,200.

The next table (Table A.2) gives the estimated sampling errors for the main labour force indicators expressed in rates or percentages. For example, the results indicate that the unemployment rate estimated at 18.1 percent has a standard error of .8 percentage

⁶ Verma, Vijay, *Sampling Methods*, Manual for Statistical Trainers Number 2, Statistical Institute for Asia and the Pacific (SIAP), Tokyo, Revised 2002.

points. This may be interpreted to mean that the true unemployment rate lies with 95 percent confidence within the interval, 16.5 percent to 19.7 percent.

Table A. 2: Sampling errors of estimates of main labour force indicators (percentage)

	estimate	Std. error	95%CI lower bound	95%CI upper bound
Labour Force Participation Rate	56.6	1.0	54.7	58.6
Employment to population ratio	46.4	1.0	44.5	48.3
Unemployment rate	18.1	0.8	16.5	19.7
