## 1. Introduction

The Producer Price Index (PPI) measures the average change over time in prices received by domestic producers for the production of their goods and services. The Producer Price Index for Rwanda is published on monthly basis.

It presents price changes for all combined products, products for local sales and that for exports. It covers a sample of 114 establishments and 402 products spread countrywide, both in Kigali City and in rural areas.

The Producer Price Index survey is conducted jointly with the National Bank of Rwanda. It now covers mining, manufacturing and energy.

## 2. General Producer Price Index

Table below presents the percentage changes on monthly and annual basis.

Level	Index ID	ISIC rev. 4 Description	Percentage change in July 2022

In July 2022, General PPI increased by 8.1 percent when compared to the same month of 2021. This is due to an increase of 11.7 percent in prices of manufacturing activities and an increase of 12.5 percent in prices of ‘mining and quarrying’.

Monthly general PPI decreased by 5.3 percent. This is mainly due to a decrease of 7.7 percent in prices of manufacturing activities.

## 3. Local Producer Price Index

#### Technical note on PPI

The Producer Price Index (PPI) measures the average change over time in the prices received by domestic producers of goods and services which are output of production or enter in the production process.

NISR publishes PPI data for Mining, Manufacturing and Energy, and it is published monthly, about 4 weeks following the month under review.

The establishments are classified according to ISIC rev. 4; and the classification is determined by their main output.

The weights used in the PPI for Rwanda refer to the value of output (turnover without taxes) of establishments as reported in the 2011 Manpower survey collecting data for the year 2010, which constitutes the reference base period for the PPI calculation (December 2010).

The point of pricing is the establishment. The price is the selling price received by the producer for the selected product as it leaves the factory gate. In general, prices are collected each month from the selected establishment by considering the mid-point of each month of the month under review.

The formula used in the PPI calculation is the geometric modified Laspeyres
