National Institute of Statistics of Rwanda (NISR), Labour Force Survey Trends, November 2019 report, January 2020

Foreword

Labour statistics play an essential role in the efforts of the country to achieve decent work for all. These statistics are needed for the development of policies towards this goal and for assessing progress towards decent work.

The government of Rwanda needs updated information for monitoring progress on programmes and policies as stipulated in the first National Strategy for Transformation (NST1), Sustainable Development Goals (SDGs) as well as vision 2050. To monitor progress towards these goals and targets, relevant, reliable, coherent, timely and accessible labour statistics must be produced.

The National Institute of Statistics of Rwanda introduced the labour force survey (LFS) program to provide key stakeholders, Ministry of Public Service and Labour and Ministry of Finance and Economic Planning, the Ministry of Education, International Labour Organization, and other users, with needed labour statistics.

The ultimate goal of the Labour Force survey is to provide data on the structure and trends of labour force, employment, and unemployment as well as other related labour market statistics for the implementation and evaluation of economic and social policies related to employment creation, income generation, skills development, and related decent work policies.

The Labour Force survey programme begun with a pilot survey conducted in February 2016. The first round of the survey was conducted in August 2016, and continued on bi-annual basis until August 2018. Since the year 2019, the survey was re-designed to provide estimates of the labour market aggregates on quarterly basis. The present report is for the fourth quarter (Q4) of the year 2023 whose data collection was conducted in November 2023.

NISR congratulates all those who contributed in one way or the other in this exercise. In particular, NISR expresses its gratitude to the survey coordinators, supervisors, Analysts, team leaders, interviewers, drivers, and respondents for their valuable time that made this survey possible.

The National Institute of Statistics of Rwanda invite policy makers, program managers, researchers, and all users to play an important role in using the valuable data showcased in the LFS rounds to contribute to enhancing Rwandans' Economic development.

MURANGWA Yusuf
Director General of NISR

Executive summary

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by the National Institute of Statistics of Rwanda (NISR). It collects data on the labour market activities of individuals aged 14 years and older who live in private households in Rwanda though only persons aged 16 years and above are covered for reporting. In this report, the survey results are mainly compared for November 2022, February 2023, May 2023, August 2023 and November 2023. However, some tables and graphs are presented with more observed data points of the labour force surveys.

In November 2023 (Q4), the working age population (16 years and above) was around 8.1 million of whom 4,074,629 were employed, 825,577 were unemployed, and 3,263,040 were out of labour force. The sum of employed and unemployed population gives the population in labour force equivalent to 4,900,206 persons. The proportion of working age population who were in the labour force increased to 60 percent in November 2023 (Q4) compared to 58.7 percent in November 2022(Q4). The proportion of the working age population outside the labour force decreased to 40 percent in November 2023(Q4) as compared to 41.3 percent in November 2022(Q4).

The share of subsistence agriculture in population outside labour force was 46.7 percent in November 2023(Q4). It increased by 11.4 percentage points as compared to 35.3 percent observed in November 2022(Q4). The sum of employed population (4,074,629 persons) and subsistence agricultural without employment (1,997,374 persons) gives the estimate number of workforce¹ in November 2023(Q4) equivalent to 6,072,003 persons. Therefore, in November 2023(Q4), the proportion of working age population engaged in employment or subsistence agriculture was 74.4 percent which increased as compared to the observed proportion one year back in November 2022 (65.9 percent).

The employment-to-population ratio increased to 49.9 percent in November 2023(Q4) as compared to 44.4 percent in November 2022 (Q4). In November 2023 (Q4), the number of employed populations increased by about 503,393 persons as compared to the same quarter one year back (November 2022) indicating an increase of 14 percent.

The sectors that had a high gain of the number of workers in absolute terms are, Agriculture forestry and fishing (+267,023 workers), Wholesale and retail trade; repair of motor vehicles and motorcycles (+114,431 workers), Accommodation and food services activities (+ 47,756 workers), Manufacturing (+37,703) and activities of households as employers (+33,717 workers). On the other hand, Construction sector lost a considerable number of workers (-45,550) when comparing November 2022 (Q4) to November 2023 (Q4).

¹ This number exclude own-use production in unpaid services, unpaid trainees, and volunteer workers.

The November 2023(Q4) results revealed that the share of paid employees in the total employment decreased to 69.5 percent as compared to 72 percent in November 2022(Q4). The share of self-employed persons increased to 26.4 percent from 24.4 percent in November 2022(Q4).

In November 2023 (Q4), the unemployment rate (16.8 percent) decreased as compared to the estimated value in November 2022 (24.3 percent). It remained relatively higher among females (20.1 percent) as compared to males (13.9 percent). It is also relatively higher among youth population aged 16 years to 30 years (20.3 percent).

Labour underutilization rate which accounts for unemployment, time-related underemployment and potential labour force decreased to 54.2 percent in November 2023(Q4) from 59.0 percent in November 2022(Q4). The labour underutilization rate was remarkably higher among females (60.6 percent) as compared to males (47.5 percent) in November 2023.

Rwanda Labour force survey, November 2023(Q4) Summary labour force indicators

Working age population 16 years old and over 8,163,246 persons							
Outside the labour force (Not employed nor unemployed) 3,263,040 persons Out of LF rate: 40.0 %			Labour force (The sum of employed and unemployed) 4,900,206 persons Labour force participation rate 60.0%				
Subsistence agriculture 46.7%	Exclusively students 23.3%	Other outside LF (Elderly, disable, discouraged job seekers...) 30.0%	Employed (All who worked for pay or profit) 4,074,629 persons Employment to population ratio: 49.9 %			Unemployed (All not employed but seeking and available to work for pay or profit) 825,577 persons Unemployment rate: 16.8%	
			Agriculture excluding subsistence foodstuff production 46.2 %	Industry 14.3 %	Services 39.4 %	Unemployed but engaged in subsistence agriculture. 57.3 %	Other unemployed 42.6 %
Potential labour force 1,294,745		Other out of labour force 1,968,295	Time related underemployed 1,235,737	Other employed 2,838,892			
Labour underutilization (3,356,059 persons): Unemployed (825,577) + Time-related underemployed (1,235,737) + Potential labour force (1,294,745) Composite measure of labour underutilization (54.2%)

Chapter 1: Introduction

The Rwanda Labour Force Survey (LFS) started in 2016 with an annual sample spread into two rounds to provide bi-annual estimates of main labour market indicators at National level. From February 2019, the sample was spread into four rounds to provide estimates of labour market indicators at national level on a quarterly basis.

In 2020, there was a change in the methodology and techniques of data production not only in Rwanda but also all over the World due to the covid-19 pandemic. The pandemic was identified for the first time in Rwanda in mid-March 2020 and different preventive measures including lockdowns were taken. Despite the pandemic, the labour force Survey continued to be conducted on a quarterly basis with some adjustments to cope with covid-19 prevention measures. It is in this context that NISR introduced the telephone interviews in May 2020(Q2) and was used in all rounds of LFS except for August 2020 till November 2022. Since February 2023 a new sampling design using 2-2-2 rotational design to improve the precision in quarter-to-quarter comparison was introduced and the face-to-face data collection method was resumed. The current findings are for the fourth quarter of LFS 2023 that was conducted in November 2023.

The main objective of the survey is to provide data on the structure and trends of labour force, employment, and unemployment as well as other related labour market statistics for the implementation and evaluation of economic and social policies related to employment creation, income generation, skills development, and related decent work policies.

The current quarterly Labour Force survey is designed according to a two-stage stratified design with a rotation scheme. At the first stage of sampling, a stratified sample of 288 census enumeration areas, called primary sampling units (PSUs) are drawn from the 2022 census sampling frame with probabilities proportional to size measured in terms of number of households according to the latest census of population. The strata are composed of the 30 administrative districts of the country, sub-divided into urban and rural areas. At the second stage of sampling, 16 households were selected from each of sampled PSUs with equal probabilities, after a fresh listing of the households in the new sample PSUs. All household members in the sample are then selected for survey interview. At the end of the data collection, the response rate was evaluated to 96.8 percent, which is 1.7 percentage points less than the previous quarter (98.5 percent).

The focus of the present report is the analysis of trends of employment and labour underutilization including unemployment at the national level by selected demographic and socioeconomic characteristics such as sex, age group, educational attainment, etc. In the present report, the results of November 2023(Q4) labour force survey are mainly compared with November 2022(Q4) and August 2023(Q3). However, in some sections, the tables or figures are presented with the additional time series including results of all quarters of the year from 2019 to 2023.

The resulting estimates of the main labour force indicators at the national level have the standard errors of about 0.8 percent.

The survey results analysed in this report are presented into seven chapters including this introduction. The other chapters cover the following: Trend of main indicators, labour force participation, employment, unemployment and labour underutilization, population outside labour force and work in agriculture.

Chapter 2: Trends of main indicators

The present chapter provides information on the trends of the main labour force indicators since November 2019. The different Labour Force survey rounds results are compared to have the time series of the main indicators such as Working age population, Labour force participation rate, Employed to population ratio, unemployment rate, and labour underutilisation rate.

2.1 Working age population.

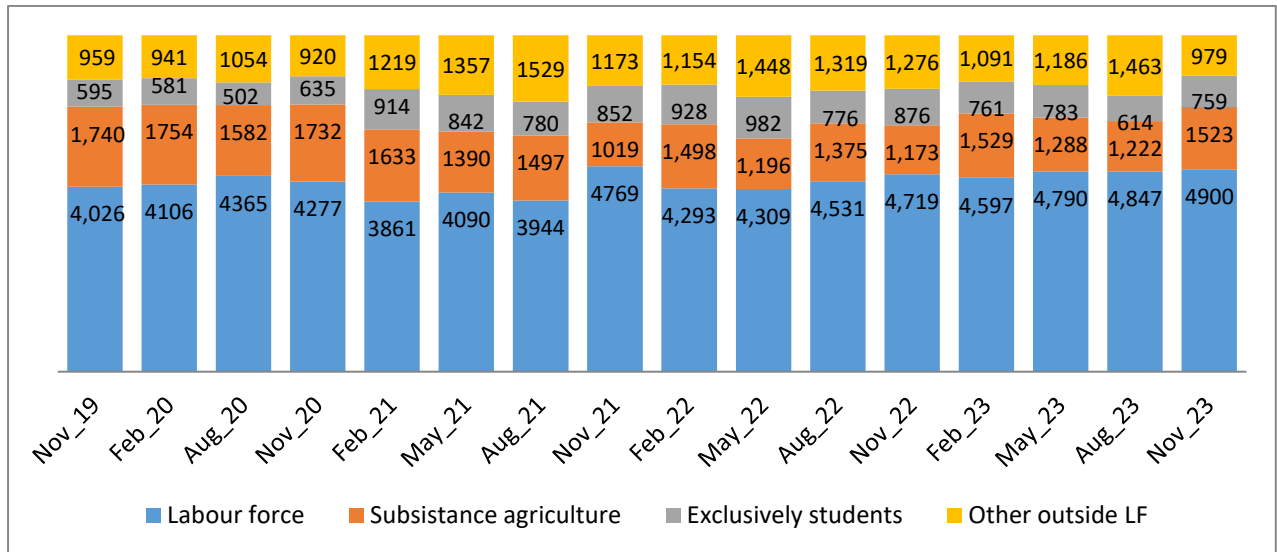

The labour force constituted 60 percent of the working age population in November 2023(Q4). It increased by 1.3 percent as compared to November 2022(Q4) and remained almost the same as compared to the previous quarter August 2023(Q3).

The LFS results indicate that the population outside the labour force was 3,263,040 in November 2023(Q4). It decreased by 1.8 percent as compared to the same quarter one year back (November 2022) and slight remained stable as compared to the previous quarter (August 2023). The population in working age who were outside the labour force and involved in subsistence agriculture (Food producers) was estimated at 46.7percent.

Students who are not involved in any economic activity make another important component of the population outside the labour force. Their number was estimated at 759,720 corresponding to 23.3 percent of the population outside the labour force. The proportion of students outside the labour force and not involved in any economic activity decreased by 3.0 percentage points in November 2023 as compared with the same quarter one year back and increased by 4.4 percentage points as compared to the previous quarter August 2023(Q3).

The remainder of working age population outside the labour force consists of elderly persons, disables, discouraged jobs seekers, etc. Their total number was estimated at 979,407 in November 2023(Q4). Its share decreased by 8.4 percentage points in November 2023(Q4) as compared to 38.4 percent of November 2022(Q4) and 13.5 percentage points as compared to 43.5 percent of August 2023(Q3).

Figure 2. 1: Trend of the main component of the working age population (, 000s)

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

2.2 Labour force participation rate, employment to population ratio and unemployment rate

Figure 2.2 illustrates the trends of some key labour market indicators. In November 2023 (Q4), the unemployment rate decreased to 16.8 percent from 18.0 percent estimated in the previous quarter. In comparison with the situation one year earlier the unemployment rate decreased by 7.5 percentage points from 24.3 percent observed in November 2022.

The employment-to-population ratio (EPR), i.e., the percentage of the working age population who is employed, is an indicator of the performance of the national economy in providing employment to its growing population. The analysis of employment trends shows that in November 2023(Q4), the estimated number of employed population was 4,074,629 persons while it was 3,571,236 in November 2022, indicating an annual increase of 14.1 percent. In comparison with the previous quarter, the estimated number of employed population increased by 2.5 percent.

The employment-to-population ratio increased to 49.9 percent in November 2023 (Q4) as compared to 44.4 percent observed in the same quarter one year earlier (November 2022) and slightly increased as compared to the previous quarter (49.0 percent in August 2023 (Q3)).

According to the results of the LFS presented in Figure 2.2, the labour force participation rate was 60 percent in November 2023(Q4). In comparison with the situation of the same quarter one year earlier (November 2022), the labour force participation rate increased by 1.3 percentage points, and it was stable as compared the one recorded in the previous quarter (59.8 percent).

Figure 2. 2: Trend of the main labour force indicators

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

UR=Unemployment rate, EPR=Employment-to-population Ratio, LFPR=Labour Force Participation Rate

2.3 Population outside labour force

Figure 2.3 presents the trend of the proportion of the working age population who was outside the labour force according to different categories. The results show that the proportion of the working age population outside the labour force recoded in November 2023 (Q4) was 40 percent, which is 1.3 percentage points lower than the estimated value in the same quarter one year earlier (November 2022). Compared to the previous quarter, the proportion of working age population who were out of labour force remained the same.

Among the components of population out of labour force; Available non-job seekers constitute a substantial category. In Rwanda, most of the population in this category are mainly subsistence farmers. The proportion of working age population falling in this category in November 2023(Q4) increased by 1.4 percentage points compared to the estimate of the same quarter one year back (November 2022) and the decrease of 2.3 percentage points as compared to the previous quarter (August 2023).

An important sub-category of the available non-job seekers is the discouraged jobseekers, i.e., those outside the labour force who did not “seek employment” for labour market-related reasons (past failure, to find a suitable job, lack of experience, qualifications or jobs matching the person’s skills, lack of jobs in the area, considered too young or too old by prospective employers). The proportion of discouraged jobseekers among the working age population increased to 11.2 percent in November 2023(Q4) from 9.9 percent observed the same quarter one year back (November 2022) and decreased as compared to the proportion observed in August 2023(Q3) (12.9 percent).

Figure 2. 1: Trend of the ratio of population outside labour force to working age population.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 3: Labour Force Participation

3.1 Labour force participation among males and females

The labour force participation rate, which is the ratio of the labour force to the working age population expressed in percentage terms, stood at 60 percent in November 2023(Q4) as compared to 58.7 percent in November 2022(Q4), indicating an increase of 1.3 percentage points. The observed increase during this period is higher among females (1.7 percentage points) than among males (1.1 percentage points). The results show a decrease of 2.1 percentage points rate of labour force participation rate among male and an increase of 2.2 percentage points among female as compared to the previous quarter.

Generally, the labour force participation rate is higher among male population than the female population over time. The gender gap in labour force participation rate was around 13.9 percentage points in November 2023(Q4) and it slightly decreased as compared to the situation of the same quarter one year back.

Figure 3. 1: Labour force participation rate by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.2 Labour force participation and education

The analysis of the labour force participation rate by educational attainment shows that the labour force participation rate was higher among those with relatively higher levels of education compared to those with lower levels of education over time. A comparison of November 2023(Q4) with November 2022(Q4) shows an increase of labour force participation rate among those with no attained level of education, primary and lower secondary level of education while for Upper secondary and university levels, the labour force participation rate decreased during the same period. The highest increase was observed among holders of lower secondary level of education (3.3 percentage points).

The comparison of the results of the current quarter with the previous quarter shows that there was significant decrease of labour force participation rate among holders of lower secondary (5 percentage points).

Figure 3. 2: Labour force participation rate by level of education

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.3 Labour force participation by age group

In November 2023(Q4), the labour force participation rate among youth aged 16 to 30 years was 57.3 percent. It significantly increased by 3.3 percentage points as compared to the same quarter one year back (November 2022) while it remained stable in higher age groups depicted in the graph below in the same period. Compared to the previous quarter, the labour force participation rate among youth decreased by 1.4 percentage points while it increased by 1.4 percentage points, and 1.8 percentage points for age groups 31-55 years and 55 years and above respectively.

Generally, the labour force participation rate is higher in the age group 31-54 years compared to the remaining age groups.

Figure 3. 3: Labour force participation rate by age group

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

3.4 Labour force participation and area of residence

Labour force participation rate by area of residence (urban and rural) was revealed to be high in urban areas compared to rural areas. This may be attributed to the diversity of job opportunities in urban areas as compared to rural areas where the number of employment opportunities is limited, and most people are involved in subsistence agriculture. The gap between the labour force participation rate in urban and rural areas increased from 10 percentage points in November 2022(Q4) to 11.5 percentage points in November 2023(Q4).

The comparison of November 2023 (Q4) and November 2022(Q4) reveals that the labour force participation rate increased by 1.4 percentage points in urban areas and remained stable in rural areas. The comparison of November 2023(Q4) and August 2023(Q3) shows that the labour force participation rate remained almost unchanged in both urban and rural.

Figure 3. 4: Labour force participation rate by area of residence

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 4: Employment

According to the recent international standards, persons of working age are classified as employed if, during a short reference period of 7 days or one week, (i) they did some work (even for just one hour) for profit or pay, in cash or in kind; or (ii) they were attached to a job or had an enterprise from which they were ‘temporarily’ absent during this period.

4.1 Employment to population ratio (EPR)

Aggregate employment generally increases with growing population. Therefore, the EPR is a measure of the extent to which the economy is providing income-generating jobs for persons who are of working age. It thus gives an indication of the demand for labour in the economy, in terms of the quantity of workers. An increase in the employment-to-population ratio is often regarded as an indicator of economic acceleration and an increase in total employment as an indicator of economic stability. In November 2023 (Q4), the Employment-to-population ratio was 49.9 percent which is 5.5 percentage points higher than the observed rate in November 2022. The employment to population ratio increased by 7 percentage points in urban areas and by 3.7 percentage points in rural areas in the same period.

It is observed that the employment-to-population ratio is generally higher in urban areas as compared to rural areas in all rounds of the labour force survey. The gap between the employment-to-population ratio between urban and rural areas remained significant in November 2023(Q4) (11.1 percentage points) and it increased as compared by November 2022(Q4).

Figure 4. 1: Employment to population ratio (EPR) by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 4.2 shows the trend in the employment-to-population ratio for the male and female separately. It is informative to note that there is a high gap between the employment-to-population ratio of males and females over time. In November 2023 (Q4) the employment-to-population ratio increased by 5.5 percentage points among both males and females as compared to November 2022(Q4). The gender gap in employment

to population ratio in November 2023(Q4), remained significant and stable (15.3 percentage points) as compared to the situation in the same quarter one year earlier. A comparison between the current quarter and the previous quarter (August 2023(Q3)) shows that the employment to population ratio decreased by 1.2 percentage points among males while it increased by 2.6 percentage points among females.

Figure 4. 2: Employment to population ratio by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

4.2 Status in employment

The results in Table 4.1 below reveal that, in November 2023(Q4) the number of employed populations increased by around 14.1 percent as compared to November 2022(Q4). It is observed that the category of employees and paid apprentices recorded the highest share of employment across all rounds of the labour force survey followed by own-account workers, contributing family workers, employers, and member of cooperatives. In November 2023 (Q4), the number of employees and paid apprentices increased by 10.1 percent as compared to November 2022(Q4). The number of employers and the number of Own account worker (without regular employees) increased by 67 percent and 23.3 percent respectively. The number of Contributing family workers increased by 25 percent.

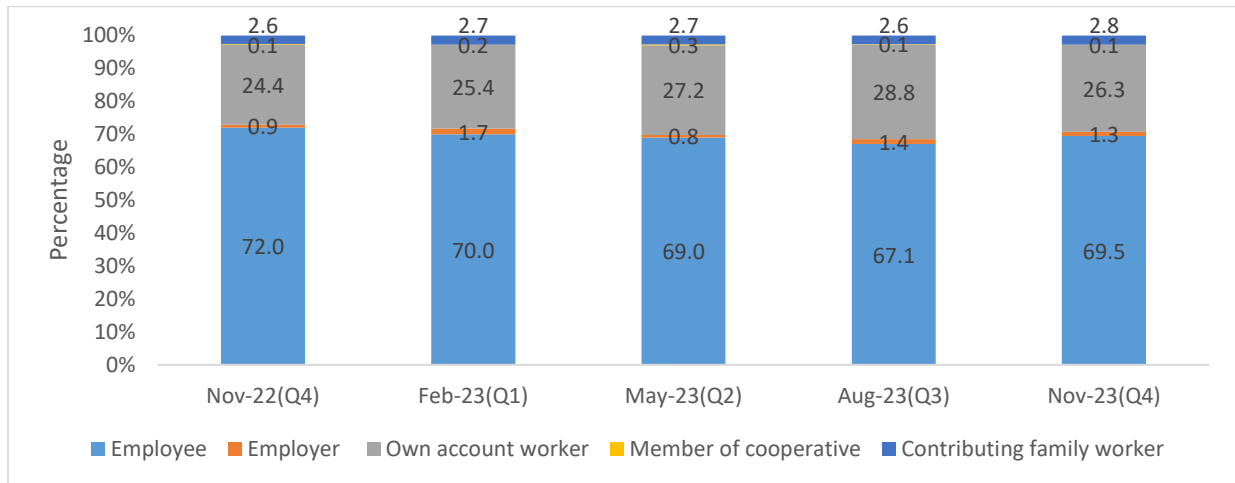

Table 4. 1: Distribution of employed population by status in employment.

Status in employment	22-Nov	23-Feb	23-May	23-Aug	23-Nov	% Change
						Nov22- Nov23
Total	3,571,236	3,803,942	3,984,502	3,972,193	4,074,629	14.1%
Employee and paid apprentices	2,571,462	2,663,932	2,746,632	2,664,454	2,830,375	10.1%
Employer (with regular employees)	30,837	63,583	31,325	56,128	51,491	67%
Own account worker (without regular employees)	870,824	965,238	1,085,947	1,145,229	1,073,887	23.3%
Member of cooperative	5,023	7,125	10,131	5,234	2,517	-49.9%
Contributing family worker	93,090	104,063	110,467	101,147	116,359	25%

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 4.3 shows the distribution of employed population according to the status of employment. It reveals that the share of employees and paid apprentices in November 2023(Q4) was 69.5 percent while it was 26.3 percent for Own account workers. Compared with November 2022(Q4), the share of employees decreased by 2.5 percentage points while it increased by 1.9 percentage points among own account workers.

Figure 4. 3: Distribution of employed population by status in employment.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

4.3 Main occupation

The table below presents the number of employed persons by occupation and its change over time. The comparison of November 2023 (Q4) with November 2022(Q4) reveals that there was a gain of employment in all occupation groups except for Craft and related trades workers which remained almost stable: Skilled agricultural forestry and fishing (+ 54.3 percent), Managers (+41.1 percent), Service and sales workers (+39.7 percent), Clerical support workers (+29.3 percent), Technicians and associate professionals (+27.8percent), Professionals (+19 percent), Elementary occupations (+5.7 percent) and Plant and machine operators and assemble (+1.4 percent).

Table 4. 2 Number of employed persons by occupation.

Major Occupation Group	22-Nov	23-Feb	23-May	23-Aug	23-Nov	% Change
						Nov 22-Nov 23
Total	3,571,236	3,803,942	3,984,502	3,972,193	4,074,629	14.1%
Managers	41,033	30,859	31,368	37,810	57,890	41.1%
Professionals	249,863	201,663	215,755	258,664	297,451	19.0%
Technicians and associate professionals	35,240	27,387	31,921	28,881	45,022	27.8%
Clerical support workers	28,383	34,208	31,084	29,595	36,707	29.3%
Service and sales workers	513,042	675,104	716,338	720,745	716,886	39.7%
Skilled agricultural forestry and fishing	173,397	211,343	234,544	184,423	267,598	54.3%

Plant and machine operators and assemble	103,208	105,915	107,748	109,949	104,627	1.4%
Elementary occupations	2,136,062	2,232,821	2,311,310	2,236,166	2,257,758	5.7%

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The percentage distribution of employed population by occupational categories as presented in table 4.3 below shows that Elementary Occupations (55.4 percent) usually registered a highest share, followed by Service and Sales Workers (17.6 percent), Professionals (7.3 percent) and then Craft and Related Trades Workers (7.1 percent) among others. The comparison of November 2023 (Q4) with the same quarter in 2022 shows that the distribution increased among Service and sales workers (+3.2 percentage points) and Skilled Agricultural, Forestry and Fishery Workers (+1.7 percentage points), while for elementary occupations and Craft and Related Trades Workers, it decreased by -4.4 percentage points and -1.1 percentage points respectively. For other remaining occupations, the distribution was stable.

Table 4. 3: Percentage distribution of employed population by major occupation group.

Major Occupation Group	22-Nov	23-Feb	23-May	23-Aug	23-Nov	Change in % Nov 22 - Nov 23

4.4 Main Economic activity

According to the results presented in Table 4.4 below, the bulk of employed population were engaged in Agriculture, forestry, and fishing (46.2 percent) in November 2023(Q4). Other sectors that employed a substantial number of population were Wholesale and retail trade; repair of motor vehicles and motorcycles (12.1 percent), Construction (7.5 percent); Manufacturing (5.2 percent), Transportation and storage (4.9 percent); Education (4.7 percent), and Activities of households as employers (4.4 percent).

Table 4. 4: Percentage distribution of employed population by branch of economic activity.

ISIC High level	22- Nov	23- Feb	23- May	23- Aug	23- Nov
Agriculture forestry and fishing	45.3	46.3	44	37.4	46.2

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The number of employed populations increased by about 503,393 persons in November 2023 (Q4) as compared to the same quarter one year back (November 2022). The sectors that had a high gain of the number of workers in absolute terms are, agriculture forestry and fishing sector (+267,023 workers), Wholesale and retail trade; repair of motor vehicles and motorcycles (+114,431 workers), Accommodation and food services activities (+47,756 workers), Manufacturing (+37,703) and Activities of households as employers (+33,717 workers) among others. On the other hand, construction lost a considerable number of workers (-45,551).

Table 4. 5: Number of employed persons by economic activity.

Branch of economic activity	22-Nov	23-Feb	23-May	23-Aug	23-Nov	Change (Nov 22-Nov 23)
Total	3,571,236	3,803,942	3,984,502	3,972,193	4,074,629	503,393

4.5 Actual hours worked.

The Figure 4.4 below shows the average number of hours worked in the reference week. It is observed that the actual worked hours during the reference period in the current quarter increased by 30 minutes from November 2022(Q4) to November 2023(Q4). The increase of working hours happened among males (1 hour of increase) while it remained stable among females. It is remarkable that employed males are working around five hours higher than the number weekly hours worked by employed females.

Figure 4. 4: Average actual hours worked.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey Series

Chapter 5: Unemployment and Labour Underutilization

Unemployment is a particular form of labour underutilization. It reflects the pressure on the labour market. It is measured in terms of the number of persons without employment, actively seeking and available for employment. Labour underutilization is a more general concept. It refers to mismatches between labour supply and demand, which translate into an unmet need for employment among the population. Labour underutilization includes unemployment, time-related underemployment, and the potential labour force referring to population not in employment who express an interest in this form of work, but for whom existing conditions limit their active job search or their availability for employment.

5.1 Unemployment rate

The unemployment rate is defined as the ratio of the number of unemployed persons to the labour force. It is the most used indicator of the labour market. It is sometimes used in a general sense as an indicator of the health of the economy, not just the labour market.

According to the Labour Force Survey results of the November 2023(Q4), the unemployment rate in Rwanda was 16.8 percent and significantly decreased compared to November 2022(Q4) (24.3 percent). The figure 5.1 below shows that the unemployment rate was higher among females (20.1 percent) as compared to males (13.9 percent) in November 2023(Q4); and there is a significant decrease of 8.2 percentage points of unemployment rate among females and 6.8 percentage points among males in comparison with observed estimates in November 2022(Q4). The analysis of the unemployment rate dynamics for males and females between November 2023(Q4) and August 2023(Q3) revealed a decrease of unemployment rate at the national level (1.2 percentage points) and among both males and females (0.9 percentage points and 1.8 percentage points respectively).

Figure 5. 1: Unemployment rate by sex.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 5.2 shows that in November 2023(Q4), the unemployment rate was higher among the population living in rural areas as compared to those living in urban areas of Rwanda (17.7 percent vs 15.2 percent respectively). The comparison between the current quarter with the same quarter in 2022 shows that the unemployment rate decreased by 6.6 percentage points among population living in rural areas and 9.2 percentage points among population living in urban areas of Rwanda.

A comparison of the results of the current quarter and the previous quarter shows that the unemployment rate was almost stable in urban areas while it decreased by 1.5 percentage points in rural areas.

Figure 5. 2: Unemployment rate by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 5.3 shows the trend of the unemployment rate among youth and adult population. In Rwanda, the youth population is defined as persons with 16 to 30 years of age. The results show that the unemployment rate among the youth has been relatively higher than the unemployment rate among adults over time. A comparison of the November 2023(Q4) results with the ones obtained one-year back shows that the unemployment rate decreased by 9.4 percentage points among youth population and by 6.1 percentage points among adults aged 31 years and over. The comparison of August 2023 (Q3) and November 2023 (Q4) reveals that the unemployment rate among the youth (16-30 years) was almost stable while it decreased by 1.5 percentage points among adults.

Figure 5. 3: Unemployment rate among youth and Adult

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The figure 5.4 below shows the trend of unemployment rate among selected age groups. In November 2023 (Q4), the highest unemployment rate was observed among those aged 16 to 24 years old (23.1 percent), while the lowest rate was observed among those aged 45 years and above (12.1 percent). The comparison between November 2022(Q4) and November 2023(Q4) shows that the unemployment rate decreased regardless the age group. It decreased by 8.9 Percentage points for age group 16 to 24 years , by 7.4 percentage points (for the age group 25-44 years and by 6.1 percentage points among those aged 45 years old and above .

Figure 5. 4: Unemployment rate by selected age groups

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

5.2 Youth Not in Employment, Education or Training (NEET)

Participation in employment, education or training is important for youth in their transition to the labour market and achieves self-sufficiency. To examine this issue, two age groups (16 to 24 years old) and (16 to 30 years old) are separately used in presenting the results in table 5.1. In November 2023 (Q4), the full count of young population aged 16 to 24 years old, who neither were in employment nor in education or training was 728,391 persons while among those aged between 16 and 30 years old, the NEET counts was 1,125,928 persons.

The share of youth (16 to 24 years old) neither in employment nor in education or training (NEET) stood at 30.4 percent in November 2023(Q4) and decreased by 5.6 percentage points at National level and among both young males and females of the same age group as compared to November 2022(Q4). In the same vein, a decrease of 8.4 percentage points and 3.6 percentage points was recorded among those living in urban areas and rural areas respectively.

The survey results also shows that the NEET rate among youth (16-30 years) was 31.5 percent in November 2023(Q4) with higher rate among females (38.4 percent) than among males (24.1percent). As regard to the area of residence, the rate was higher in rural areas (34.9 percent) than in urban areas (24.6 percent).

The comparison of the current NEET rate with the results of the same quarter one year earlier shows that the NEET rate decreased by 3 percentage points at national level and by 6.9 percentage points among young males while it remained almost the same among young females. A decrease of 5 percentage points of the NEET rate was also observed among young males living in urban.

Table 5. 1: Share of youth Not in Employment, Education or Training (NEET) by sex and area of residence

Age group	sex/ Residence						% change
		22-Nov	23-Feb	23-May	23-Aug	23-Nov	Nov 22. to Nov 23
16-24 years	Total	36	32.1	32.7	32.5	30.4	-5.6
	Male	29.9	28.5	29.4	27	24.3	-5.6
	Female	41.9	35.6	35.9	37.9	36.3	-5.6
	Urban	31.2	24.8	25.6	23.6	22.8	-8.4
	Rural	37.5	35.6	36	36.5	33.9	-3.6
16-30 years	Total	34.5	33.2	33.7	33.2	31.5	-3
	Male	31	27.4	27.3	24.7	24.1	-6.9
	Female	38	38.7	39.6	41.1	38.4	0.4
	Urban	29.6	26.1	27.4	25.5	24.6	-5
	Rural	35.8	36.8	36.9	37	34.9	-0.9

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

5.3. Labour Underutilization

Labour underutilization includes unemployment, time-related underemployment, and potential labour force. Time-related underemployment refers to the situation when the working time of persons in employment is insufficient in relation to alternative employment situations in which they are willing and available to engage. Potential labour force is defined as all persons of working age outside the labour force who, during the reference period, were neither in employment nor in unemployment but who were considered as either (a) *unavailable jobseekers* (seeking employment but not currently available) or (b) *available potential jobseekers* (currently available for employment but did not carry out activities to seek employment).

The results presented in figure 5.5 shows that the composite measure of labour underutilization rate was 54.2 percent in November 2023(Q4) representing a decrease of 4.8 percentage points as compared to 59.0 percent recorded in November 2022(Q4). The labour underutilization rate was higher among females (60.6 percent) than among males (47.5percent). The comparison of the results in November 2023(Q4) and August 2023(Q3) shows that the labour underutilization rate decreased by around 1.6 percentage points at National level and by 3 percentage points among female population while it remained almost stable among males.

Figure 5. 5: Labour under-utilization rate by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The results presented in figure 5.6 below show that the labour under-utilization rate was higher among the population living in rural than those living in urban areas of Rwanda. The comparison of November 2023(Q4) and November 2022(Q4) reveals that the labour underutilization decreased by 1.7 percentage points among the population living in urban areas of Rwanda and 3.5 percentage points among population living in rural areas. A comparison of the labour underutilization rate in the current quarter with the previous

quarter reveals that it decreased by 1.6 percentage points at the national level and in rural areas and by 1.4 percentage points in urban areas.

Figure 5. 6: Labour under-utilization rate by area of residence.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Figure 5.7 presents the results of the labour underutilization rate by age group (youth and adults). It is observed that the labour underutilization rate decreased by 6.3 percentage points among youth population from 61.9 percent in November 2022(Q4) to 55.6 percent in November 2023(Q4) while it decreased by 3.8 percentage points among the adult population in the same period.

Figure 5. 7: Trend in labour underutilization rate by Youth and Adult.

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

The survey results presented in figure 5.8 below, reveals that the labour underutilisation rate was higher among population in lower age group than among adult population. In November 2023(Q4), the labour underutilization rate was 57.2 percent among youth in age group 16-24 years, 53.4 percent among population aged 25-44 years, and 52.9 percent among those aged 45 years old and above. A comparison between November 2022(Q4) and November 2023(Q4) reveals that the labour underutilisation rate substantially decreased by 7.2 percentage points among youth aged 16-24 years old. In the same way, it decreased by 3.9 percentage points among both populations aged 25-44 years and 45 years and above respectively.

Figure 5. 8: Trend in labour underutilization rate by selected age group

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

Chapter 6: Population outside the Labour Force

The population outside the labour force constitutes a large part of the working age population. It includes population engaged exclusively in activities for producing goods or services such as subsistence production of goods, own use production of services, volunteer production of goods or services and unpaid trainee or apprentice work, who have not carried out any activity for pay or profit during the reference period. It also includes students who are enrolled in schools, persons who currently do not seek for employment opportunities (not job seekers) such as discouraged job seekers. A particular characteristic of countries with large subsistence foodstuff production is the fact that the size of the working age population outside the labour force may be large.

The population outside the labour force stood at 40.0 percentage of the working age population. The comparison of the current population outside labour force with the estimated value in the same quarter one year back reveals that it decreased by 1.4 percentage points.

6.1 Main components of population outside the labour Force

The population outside labour force can be divided into three important components, namely, students, persons involved in subsistence agriculture and other outside labour force including largely population who are available to work but do not do anything to search for a job, retired persons, people unable to work because of illness or disability.

Table 6.1 presents the main components of population outside the labour force. The population outside the labour force who was engaged in subsistence agriculture represented 46.7 percent in November 2023 (Q4). Those who were exclusively classified as students represented 23.3 percent while the remaining part represented 30.0 percent. The comparison with the same quarter one year back reveals significant changes in both magnitude and distribution of the population outside labour force. The share of students decreased by 3 percentage points and the share of other outside labour force decreased by 8.4 percentage points. Meanwhile, the share of subsistence agriculture increased by 11.4 percentage points.

Table 6. 1: Main components of Persons outside the labour force

Main components	LFS rounds					% change Nov-22 to Nov -23
	22-Nov	23-Feb	23-May	23-Aug	23-Nov	
% Main components						
Count (,000)	3,324	3,380	3,258	3,253	3,263	-1.9
Total	100	100	100	100	100	100
Exclusively student	26.3	22.5	24.1	18.9	23.3	-3
Subsistence agricultural farmers	35.3	45.2	39.6	37.6	46.7	11.4
Other outside LFS	38.4	32.3	36.4	43.6	30	-8.4

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.2 Population outside the labour force by area of residence

The results in figure 6.1 below are about the percentage of population outside labour force as proportion of working age population at national level and in both urban and rural separately.

The comparison of November 2022(Q4) and November 2023(Q4) reveals that there was a decrease in the proportion of the population outside labour force evaluated to 1.3 percentage points at the National level, 1.4 percentage points in urban areas while it remained almost stable in rural areas. The comparison of November 2023(Q4) and August 2023(Q3) shows that the proportion of population outside labour force remained stable in both urban and rural areas.

It is also observed from Figure 6.1 that the proportion of population outside labour force is higher in rural areas in comparison to urban areas. In November 2023(Q4), the urban-rural gap was around 11.5 percentage points compared to 10.0 percent points in November 2022(Q4), indicating an increase of 1.5 percentage points.

Figure 6. 1: Population outside Labour force by Area of residence

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.3 Population outside the labour force by age group

Figure 6.2 shows that the proportion of population outside labour force among youth (16-30 years old) decreased from 46 percent in November 2022 (Q4) to 42.7 percent in November 2023(Q3) and remained relatively stable among adult (31 years and above) in the same period.

Figure 6. 2: Population outside the Labour force by Age category

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS)

6.4 Population outside the labour force by level of educational attainment

According to the Labour Force Survey's findings, people with higher educational attainment had a lower fraction of the working-age population outside the labour force than people with lower levels of education. From November 2022(Q4) to November 2023 (Q4), the proportion of working age population outside the labour force decreased among those without any completed level of education (1.2 percentage points), Primary (1.7 percentage points), lower secondary (3.3 percentage points) level of education while it increased within upper secondary, and university level of education where the rate increased by (1 and 5.1 percentage points, respectively).

Figure 6. 3: Population outside the Labour force by Education level attained.

Chapter 7: Work in agriculture

Due to the importance of the agriculture sector in the economy of Rwanda, a special attention has been given to it in the present report. The introduction of 2013 standards on work, employment and labour underutilization statistics split workers in agriculture occupation into two categories: market oriented and non-market oriented. Workers in the former category are considered as employed while those in latter are not counted as employed. In this report, all parts are brought together to analyse the work in agriculture sector.

7.1 Agricultural status of workers

Four categories of agricultural workers can be distinguished: (a) those who worked exclusively in market-oriented agriculture for pay or as a self-employed individual; (b) those who only engaged in subsistence agriculture; (c) those whose primary occupation was outside of agriculture but who performed activities related to the production of food for their own consumption; and (d) those who worked in market-oriented agriculture as a secondary occupation.

The full count of workers in agriculture sector (Market oriented in agriculture + Subsistence agriculture) as presented in table 7.1 revealed that in November 2023(Q4), 53.9 percent of working age population were involved in agriculture activity, marking an increase of 7.0 percentage points as compared to November 2022(Q4) (46.9 percent).

In November 2023(Q4), the share of persons who exclusively participated in Subsistence agriculture slightly decreased while the shares of those involved in market-oriented agriculture remained stable as compared to November 2022(Q4).

Table 7. 1: Works status in agriculture

Categories of agriculture	Nov-22	Feb-23	May-23	Aug-23	Nov-23
Market oriented agriculture as main job (a)	42.9	42.1	45.2	43	42.8
Subsistence agriculture exclusively (b)	45.9	46.6	42.7	44.8	45.4
Participated in Subsistence agriculture but have non-agriculture main job (c)	11.1	11.1	11.8	12.1	11.5
Market oriented agriculture as secondary job (d)	0.1	0.1	0.2	0.1	0.3
Total (100%)	100	100	100	100	100
Count ('000s)	3,772	4,182	3,873	3,456	4,399
Proportion of working age population	46.9	52.5	48.1	42.6	53.9

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

Note: The proportion computed here is subject to the agriculture workers not to the employed population.

7.2 Characteristics of agricultural workers

The focus of the following sections is on the two first categories of table 7.1 (Workers in market oriented agricultural in main job and those involved exclusively in subsistence agriculture).

The results reveal that the bulk of agricultural workers were involved in subsistence agriculture with the higher proportion among female farmers than among agricultural male farmers.

In November 2023(Q4), the share of agricultural workers engaged in subsistence agriculture was 51.5 percent and it remained relatively stable as compared to November 2022(Q4).

The proportion of male farmers engaged in market-oriented agriculture was 55.7 Percent in November 2023(Q4), it was greater than the corresponding proportion of females involved in the same activity (43.3 percent). Conversely, the proportion of female farmers engaged in subsistence agriculture was higher than the corresponding proportion of males (56.7 percent and 44.3 percent, respectively). The results reveals that the engagement of male and female farmers in market-oriented agriculture remained almost stable between November 2022 and November 2023.

Table 7. 2: Trend of proportion of agricultural workers by sex.

		LFS rounds					% Change
		Nov-22	Feb-23	May-23	Aug-23	Nov-23	Nov-23 to Nov-22

	Subsistence agriculture	57	56.6	52.6	55.6	56.7	-0.3

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

Table 7.3 below presents the trend of the share of market oriented and subsistence agricultural workers among youth and adult separately. The share of adults population engaged in subsistence agriculture was higher than the share of youth population in the same activity (53.7 percent and 46.8 percent respectively) in November 2023(Q4).

The comparison between November 2022(Q4) and November 2023(Q4) revealed that, the share of subsistence agriculture among youth decreased by 2.2 percentage points while among adults, it slightly increased by 0.7 percentage points.

The distribution of agricultural workers by education attainment, presented in table 7.4 shows that the higher the level of educational attainment, the lower the likelihood of participation in agricultural activities for both market-oriented and subsistence agriculture.

7.3 Share of agriculture in the total work force

The total work force can be defined as the sum of total employment (Paid/Profit or cash oriented) and the total number of workers engaged in subsistence agriculture. Thus, the share of agriculture workers in the total work force is the proportion of agriculture workers in the total workforce.

According to the findings shown in figure 7.1 below, the proportion of agricultural workers in the workforce in November 2023(Q4) was 63.9 percent. At the national level, it increased by 0.8 percentage points from November 2022(Q4). In November 2023(Q4), 72.0 percent of female workers were engaged in agricultural activity, compared to 55.3 percent of male workers.

Figure 7. 1: Share of workers in agriculture by sex

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS).

The share of agriculture workers in total workforce is inversely correlated with the level of education attainment. Persons with lower level of educational attainment are more likely to join agricultural work as compared to others with higher level of education. The result reveals a declining trend of the share of agriculture workers in all levels of education apart from university as compared to the same quarter one year earlier.

Figure 7. 2: Share of workers in agriculture by level of education attained.

Appendix A: Survey Methodology and Data quality

The current quarterly labour force survey is designed according to a two-stage stratified design with a rotation scheme. At the first stage of sampling, a stratified sample of 288 census enumeration areas, called primary sampling units (PSUs), is drawn from the 2022 census sample frame with probabilities proportional to size (pps) measured in terms of number of households according to the latest census of population.

The strata are composed of the 30 administrative districts of the country, sub-divided into urban and rural areas. At the second stage of sampling, 16 households were selected in all PSUs, with equal probabilities after a fresh listing of the households in the new sample PSUs. Thereafter, all household members in the sample are then selected for survey interview.

The sample size in the current quarter is about 4,608 households, composed of three rotation groups marked with the symbol r in the table. The proposed rotation design is 2-2-2, that is each sample household is interviewed four times during the period of 2 years. Accordingly, a sample household is in the sample in two consecutive quarters, leaves the sample in the next two quarters, returns in the sample in the same quarters of the subsequent year, before leaving the sample altogether.

- **Sample weights**

Three steps were involved in the calculation of the sample weights: Calculation of the design weight, Adjustment for non-response; and Calibration to known population projections.

The design weight of a given sample household is the inverse of the probability of selection of a sample household. This probability is calculated as the product of two probabilities. The first is the probability of selection of the enumeration area k where the sample household is residing,

$$p_k = \eta \times N_k$$

Where N_k is the number of households in the enumeration area according to the sampling frame and η is the proportionality factor of the pps-sampling scheme.

The second is the probability of selection of the sample household within the enumeration area k .

$$p(hh_k) = \frac{16}{N_k^1}$$

Where 16 is the fixed sample-take in enumeration area k and N_k is the listed or estimated number of households in the enumeration area k .

The designed sampling weights for the quarterly Labour Force Survey are labelled “Designed Weight”. They are calculated as a function of the weights calculated earlier for the Quarterly survey:

The design calculated as,

$$DesignWeight(hh_k) = d_k = \frac{1}{p_k} \times \frac{1}{p(hh_k)}$$

The non-response adjusted weight is then obtained by the dividing the design weight with the response rate,

$$AdjustedWeight(hh_k) = d_k = \frac{d_k}{r_k}$$

Where the response rate in enumeration area k is the percentage number of responding households among the total eligible households in the sample enumeration area.

Finally, the adjusted weights were calibrated to known population projections for four demographic groups: Males and females under 16 years old, and males and females aged 16 years old and above.

The population projections were derived from the NISR 2022 census publication. The projections were adjusted by deducting estimated values for the institutional population not living in private households. The calibration procedure followed the methodology of Deville and Sarndäl.² Accordingly, the final calibrated weights were obtained from the formula,

$$CalibratedWeight(hh_k) = w_k = d'_k \times (1 + \lambda x'_k)$$

- **Data quality**

Like in all sample surveys, the results of the LFS November 2023(Q4) are subject to sampling and different forms of measurement errors. This section provides information on sampling errors.

- **Sampling errors**

Sampling errors arise because the survey did not cover all elements of the population, but only a selected portion. The sampling error of an estimate is calculated based on the difference between the estimate and the value that would have been obtained based on a complete count of the population under otherwise identical conditions.

² Deville, J.C., and Sarndäl, C.E., “Calibration Estimators in Survey Sampling,” *Journal of the American Statistical Association*, Vol. 87, 1992, pp. 376-382.

The table A.1 below gives the sampling errors of the main labour force estimates obtained from the LFS November 2023(Q4). They have been calculated based on the general principle that in multi-stage sample designs the variance contributed by the later stages of sampling is, under broad conditions, reflected in the observed variation among the sample results for first-stage units. Thus, the sampling variance of a variety of statistics, such as totals, means, ratios, proportions, and their differences can be obtained on the basis of totals calculated for the primary sampling units, here the localities³. The calculations took into account the fact that the sampling weights were calibrated and used the residual method proposed by Deville and Sarndäl p. 380.

Table A. 1: Sampling errors of estimates of main Labour force aggregates

Indicator	Estimate	Standard error	Relative standard error	Confidence interval	
				Lower	Upper
Population 16+ yrs	8,163,246	377,993	4.6%	7,418,902	8,907,590
Labour force	4,900,206	219,199	4.5%	4,468,558	5,331,854
Employment	4,074,629	187,124	4.6%	3,706,144	4,443,114
Unemployment	825,577	53,196	6.4%	720,823	930,330
Outside labour force	3,263,040	182,464	5.6%	2,903,732	3,622,349

Source: National Institute of Statistics of Rwanda (NISR), Labour Force Survey (LFS), November 2023(Q4)

As an illustration of the use of the table, consider the second row of the table on the labour force. The total labour force is 4,900,206 estimated with a relative standard error of 4.5 percent. The true value at 95 percent confidence level lies within the interval 4,468,558 and 5,331,854.

The next table (Table A.2) gives the estimated sampling errors for the main labour force indicators expressed in rates or percentages. For example, the results indicate that the unemployment rate estimated at 16.8 percent has a standard error of 0.8 percentage points. This may be interpreted to mean that the true unemployment rate lies with 95 percent confidence within the interval, 15.3 percent to 18.4 percent.

Table A. 2: Sampling errors of estimates of main labour force indicators (percentage)

Indicator	Estimate	Standard error	Confidence interval	
			Lower	Upper
Labour Force Participation Rate	60.0	0.9	58.3	61.7
Employment-Population Ratio	49.9	0.8	48.3	51.5
Unemployment rate	16.8	0.8	15.3	18.4
