# CONSUMER PRICE INDEX (CPI)

## JANUARY 2025

10 February 2025

National Institute of Statistics of Rwanda

## 1. Summary

This is the monthly publication of the Consumer Price Index (CPI) for the month of January 2025. Urban CPI will be the focus of this publication as it is the headline index for monetary policy purposes.

### 1.1. Urban Index

Urban CPI increased by 7.4 percent on annual basis (January 2025 compared to January 2024) and it increased by 0.5 percent on monthly basis (January 2025 to December 2024). The annual average inflation rate between January 2025 and January 2024 was 5 percent.

### 1.2. Rural Index

Rural CPI increased by 4.5 percent on annual basis and it decreased by 2.9 percent on monthly basis.

### 1.3. Overall Rwanda Index

Rwanda CPI increased by 5.7 percent on annual basis and it decreased by 1.6 percent on monthly basis.

(1) Fresh products are food products which have seasonal fluctuations

(2) Proxy for underlying inflation

#### **4. Methodological notice**

The Consumer Price Index (CPI) is a measure of the average change over time of goods and services purchased by households. The CPI uses a Modified Laspeyres formula to calculate the index. The reference population for the CPI consists of all households, both urban and rural in Rwanda.

The household basket includes 1,622 products sold in many places spread all over the country. A variety of places of observation are selected: shops, markets, hospitals, schools etc. More than 29,482 prices in urban areas and 10,744 in rural areas are collected every month.

Weights used for the index are from the Household Living Conditions Survey (EICV4) results conducted in 2013-2014 with a sample of 14,419 households.

Each month, NISR publishes the All Rwanda index, All Urban index and All Rural index. The Urban CPI is considered as the headline index for monetary policy purposes. In addition, select detailed item indices are published for items judged to be important or experiencing extreme price movement.

## 4.1 Main terms used in Rwandan CPI

**General index:** The highest level of aggregation of a CPI which covers all the items within the scope of the CPI

**Core (underlying) inflation:** A type of CPI which shows the underlying trend in inflation by excluding those movements which arise from transient factors such as seasonality or other short term price volatility

**Index reference period (Feb 2014=100):** The period with which all other periods are compared (the period for which the value of the CPI is set at 100).

**Monthly inflation:** Compare the current index number compared with the index number of the previous month

**Annual inflation:** Compare the index number for a particular month with the index number for the same month of the previous year

**Annual average inflation:** Compare the average of all the monthly indices in a particular year with the corresponding average for the previous year. Any twelve-month average (eg. from July 2016 to June 2017) may be compared with the twelve-month average (also from July 2015 to June 2016) in order to calculate June 2017 inflation rate.

## 4. 2. How to Interpret CPI

Movements of the indices from one month to another usually are expressed as percentage changes rather than changes in index points. The level of the index (relative to its base period) affects index point changes, but it does not affect percent changes. The following example illustrates how to calculate percentage changes:

### *Index point change*

CPI	178
Less CPI for previous period	<u>176</u>
Equals index point change	2

### *Percent change*

Index point difference	2
Divided by the previous index	176
Equals	0.011
Results multiplied by 100	0.011 x 100
Equals percent change	1.1
