The Urban CPI increased by 1.4 percent in June 2014 compared to the same month of the previous year. This is mainly due to the rising prices of 'food and non-alcoholic beverages' 1.9 percent, 'education' 7.1 percent and 'Restaurants and hotels' 7.8 percent.

The biggest negative contribution came from transport (0.5 percentage points).

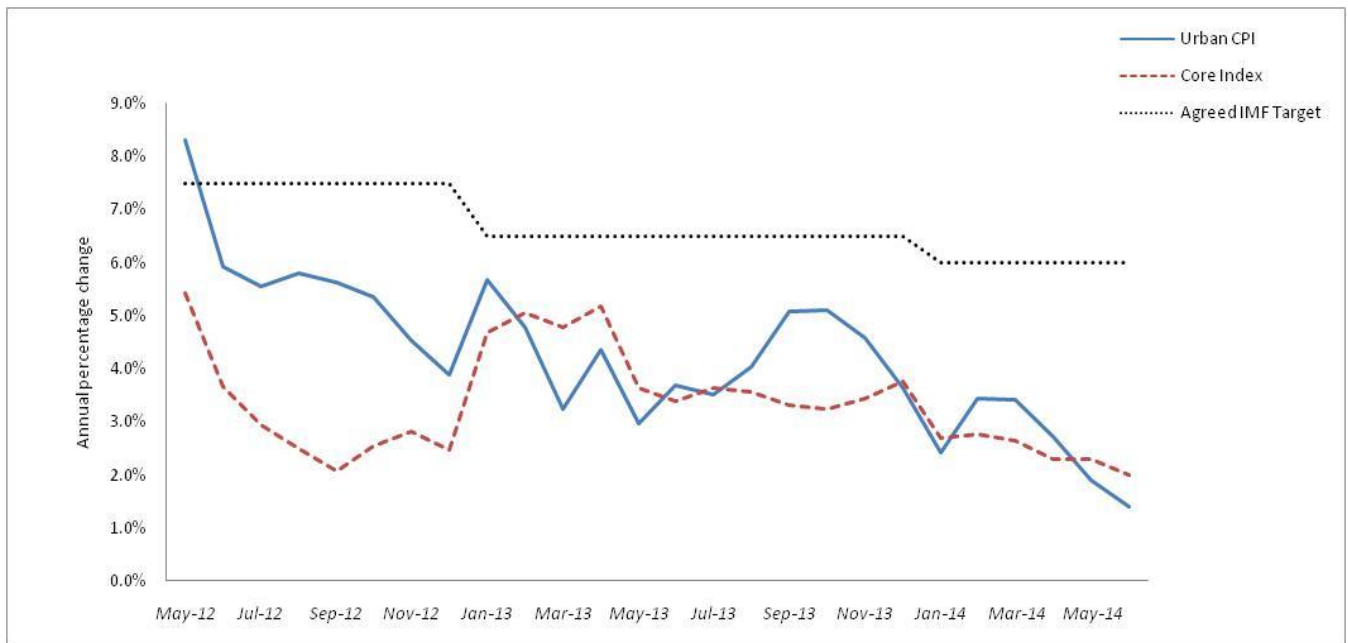

The monthly change in CPI is -0.5 percent compared to May 2014. Vegetables and transport dropping by 0.5 and 3.0 percent respectively.

The underlying inflation rate (excluding fresh food and energy) decreased by 0.6 percent when compared to May 2014 and increased by 2.0 percent when compared to June 2013. The annual average underlying inflation rate is 3.3 percent.

### 3. Other selected urban indices

In this section, we present five selected urban indices - the local goods index, the imported goods index, the fresh products index, the energy index and the core index.

On an annual basis, the local goods index increased by 2.1 percent, the imported goods index decreased by 0.4 percent, the fresh products index decreased by 0.5 percent, the energy index decreased by 0.2 percent and the core index or the general index excluding fresh products and energy

increased by 2.0 percent.

On a monthly basis, the local goods index decreased by 0.1 percent, the imported goods index decreased by 1.8 percent, the fresh products index decreased by 0.5 percent, the energy index is stable and the core index decreased by 0.6 percent.

(1) Fresh products are food products which have seasonal fluctuations

(2) Proxy for underlying inflation

#### 4. Methodological notice

The Consumer Price Index (CPI) is a measure of the average change over time of goods and services purchased by households. The CPI uses a Modified Laspeyres formula to calculate the index. The reference population for the CPI consists of all households, urban and rural in Rwanda.

The household basket includes 1,022 products sold in many places spread all over the country. A variety of places of observation are selected: shops, markets, hospitals, schools etc. More than 25,392 prices in urban areas and 8,329 in rural areas are collected every month.

The weights used for the index are from the result of the Household Living Conditions Survey (EICV III) conducted in 2010-2011 with a sample of 14,308 households.

##### 4.1. How to Interpret the CPI

Movements of the indices from one month to another usually are expressed as percentage changes rather than changes in index points. The level of the index (relative to its base period) affects index point changes, but it does not affect percent changes.

The following example illustrates how to calculate percentage changes:

*Index point change*

CPI

178

Less CPI for previous period 176  
Equals index point change 2

*Percent change*

Index point difference 2  
Divided by the previous index 176  
Equals 0.011  
Results multiplied by 100  $0.011 \times 100$   
Equals percent change 1.1
