

Seasonal Agricultural Survey (SAS)–2015 Season A

I. Introduction

In 2015, the National Institute of Statistics of Rwanda (NISR) conducted Seasonal Agricultural Surveys (SAS) covering season A that starts in September 2014 and ends with February 2015. This is a summary of key results and related tables about land use, crop land, agricultural inputs, agricultural practices and production. An annual comprehensive SAS Survey report will be published after covering all three agricultural seasons.

The sample is composed of two categories of respondents: Agricultural Operators¹ and Large Scale Farmers (LSF)². The sampling method used was a dual frame sampling design combining selected area frame sample³ segments and a list of Large Scale Farmers. Coverage of 540 segments was spread throughout the country with 25,495 agricultural operators in Season A phase 1 from which 5,502 agricultural operators were selected during Second Phases. Furthermore, enumerated Large Scale Farmers in screening phase were 558 in 2015 Season A, of which 199 Large Scale Farmers were selected during Second Phases.

II. Agricultural land

Using satellite imagery, the whole country was stratified into homogeneous strata according to crop intensity and other land-use characteristics as follows:

Stratum	Description	Total (Hectares)	Percent
1.1	Intensive agriculture land (Season A and B)	1,479,081.4	81.9
1.2	Intensive agriculture land (Season A and B, with potential for Season C)	48,388.2	2.7
2.1	Other marshlands	95,820.7	5.3
2.2	Marshlands potential for rice	20,200.9	1.1
3.0	Rangeland	133,848.5	7.4
10.0	Tea plantation	28,763.1	1.6
Total agriculture land		1,806,102.9	100.0

2015 Seasonal Agriculture Survey

¹ Agricultural operators: These are Small Scale Farmers within the Segments

² Large Scale Farmer: The person, institution or agricultural or livestock cooperatives, that satisfies the unit measurements defined by survey rules e.g. farmer growing crops on ten hectare of land or more or any farmer raising 70 or more cattle, 350 goats and sheep, 140 pigs, 1,500 chicken or managing 50 bee hives.

³ Area frame sampling: A method in which an area to be sampled is sub-divided into smaller blocks that are then selected at random and then again sub-sampled or fully surveyed. This method is typically used when a complete frame of reference is not available to be used.

III. Farm characteristics (Area and Production)

Crop Land

In 2015 Season A, the main crops were Cassava (21.6% of the total cultivated area), Banana (23.0% of the total cultivated area), Beans (19.8% of the total cultivated area), and Maize (12.4% of the total cultivated area); other crops took 23.2% of the total cultivated area. Fallow land represented 20.4% in season A of the total arable land of Rwanda.

Crop Production

In 2015 Season A, the share of crop production by groups of crops in Rwanda was highest for Tubers and Roots (37.4%) followed by Banana (27.9%) and Cereals (10.5%). Other crop groups contributed as follows: Vegetables and Fruits (4.7%) and Legumes and Pulses (7.8%).

IV. Agricultural Inputs

Use of seeds and fertilizers

In 2015 Season A, 84.5% of agricultural operators used traditional seeds whereas 15.5% used improved seed. For LSF, the use of traditional seeds and improved seeds were 79.8% and 20.2% respectively.

For agricultural operators, the use of organic fertilizers and inorganic fertilizers were 51.3% and 21.1% for 2015 season A, respectively. On the other hand, for LSF, the use of organic fertilizers and inorganic fertilizers were 66.8% and 54.8% for 2015 season A, respectively.

Use of pesticides

In 2015 Season A, the percentage of agriculture operators who used pesticides is 9.1%. Among the Large Scale farmers, the percentage of those who used pesticides was 46.7%.

V. Agricultural practices

Irrigation practices

In 2015 season A, 1.1% of agriculture operators practised irrigation while 24.6% of Large Scale Farmers practised irrigation.

Anti-erosion activities

In 2015 season A, 41.3 % of all agriculture operators practised anti-erosion activities. Likewise, Large Scale Farmers who practised anti-erosion activities was 48.7 %.
