REPUBLIC OF RWANDA

NATIONAL INSTITUTE OF STATISTICS OF RWANDA

CONSUMER PRICE INDEX (C.P.I.) Kigali – November 2007

CAUTION

The National Institute of Statistics of Rwanda is very pleased to deliver to users the new Consumer Price Index (CPI) based in 2003 that replaces the previous one which was based in 1989. The Index is published every month by the 15th.

The *consumer price index (CPI)* in November has risen **0.19%** compared to last month. The annual inflation rate has shown a rise compared to last month's annual rate of 7.92% as it now stands at **8.67%**, (November 2007 compared to November 2006).

The *core inflation* – which excludes fresh produce and energy prices – went up slightly over the month by **0.33%**, and now stands at **10.23%** as compared to November 2006.

Figure one on page two shows these data over time.

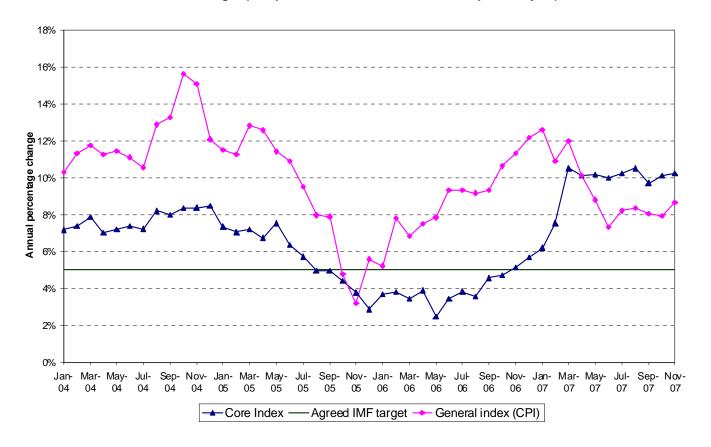

The **annual average CPI** of the last twelve months (December 2006 to November 2007) increased by **9.5%** when compared to the average of the index in the previous twelve months (December 2005 to November 2006). This small decline from 9.8% last month is a continuation of a declining annual average CPI since May 2007.

The **annual average core index** of the last twelve months (December 2006 to November 2007) increased **9.3%** when compared to the average of the index in the previous twelve months (December 2005 to November 2006). This is an increase in the rate of inflation from last month's 8.8%.

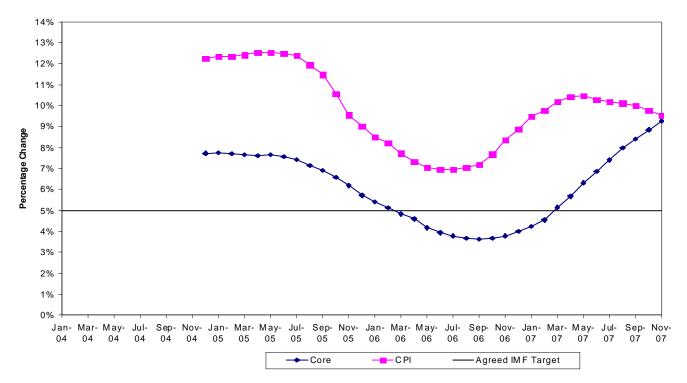

The second figure on page two shows the annual average time series.

Please see section 'CPI and Core Inflation (Annual Average Percentage Change)' for more details on annual average inflation rates.

Annual changes (Comparison with the same month of the previous year)

CPI and Core Inflation (Annual Average Percentage Change)

Note: Data not available before December 2004 for annual averages.

Although prices for food and non-alcoholic beverages did not increase significantly over the month (+0.11%), prices of bread and cereals increased considerably (+3.23%). All other categories did not experience substantial price changes; apart from the 'restaurants and hotels' category the prices of which fell by 2.66%. Changes over the year show upward pressure driven mostly by *housing*, *water*, *electricity*, *gas and other fuels*. This is largely due to rising prices of rents (+54.1%), and water (+34.8%).

The table below gives more in depth information on the price movements throughout the past months and year:

Index (2003=100)	135.7	137.0	140.0	142.9	146.4	145.9	143.9	143.2	144.4	146.0	147.1	147.2	147.5
Annual changes	11.3	12.1	12.61	10.9	12.0	10.1	8.8	7.3	8.3	8.4	8.0	7.9	8.7

The table below can explain the recent price movements in the economy by looking at different sources of inflation. It shows that 'local goods' are inflationary, contrary to those which are 'imported'; over the past year (November 2007 to November 2006) we see an **11.06%** increase in prices for locally produced goods compared to only **2.44%** rise for imported goods.

This table also highlights that *'fresh produce'* prices rose **7.44%** as compared to November 2006. This is lower than recent price changes; for example, between June 2006 and April 2007 these annual rates were never below 15%. These high rates started going down in February this year.

In addition, this month's prices have shown a fall in *fresh products*, by **0.67%** as well as *local products*, by **0.03%**. Last month, these rates were -0.44% and +0.12%, respectively. The *energy* index rose by 1.04% over the month; it had gone up by 0.3% last month. However over the year prices are 2.62% higher.

The chart below records the annual change in the CPI and thus shows that price levels in November

2007 compared to November 2006 are **8.67%** higher. This rate is a rise from the **7.92%** in October 2007.

CPI and Core Inflation (Annual Average Percentage Change)

In November 2007 the **annual average CPI** was 9.5% as compared to an annual average of 9.8% last month. This is shown graphically on page two.

Driving this rise has been the increase in the price index for 'food and non-alcoholic beverages', which contributed 3.77% to the overall annual average CPI. Disaggregating further the increase can be attributed to the price of vegetables, which contributed 2.49%, a decrease from last month's 2.66%. This rate has steadily been going down since May.

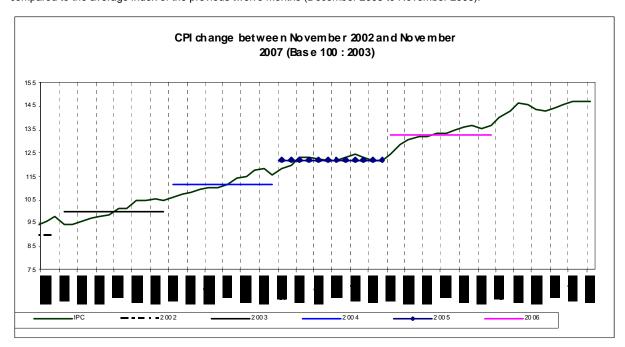

The **annual average core inflation** stands at 9.3% in November up from 8.8% in October 2007. 'Housing, water, gas, electricity and other fuels' has been another significant factor increasing annual average *CPI* and *core inflation*. The rise associated with 'housing, water, gas, electricity and other fuels' contributed 3.16% to the overall CPI and has been sourced to: rising rents in Kigali; a water tariff increase in January 2007; the continuing effect of the rise of the electricity tariff in December 2005 (not included in core); and the rise in price of charcoal due to governmental environmental policy attempting to prevent deforestation (not included in core).

The table below shows the evolution of these indicators over time. On a monthly basis the annual average inflation rate fell by 0.1 percentage point while the core increased by 0.5 percentage points.

Evolution (over 12 months) of the rate of inflation (%)(1)

MONTH	Nov. 06	Dec. 06	Jan. 07	Feb. 07	Mar. 07	Apr. 07	May 07	Jun. 07	Jul. 07	Aug. 07	Sep. 07	Oct. 07	Nov. 07

METHODOLOGICAL NOTICE

The Consumer Price Index is a Laspeyres index that covers household consumption as it is used by

national accounts. The reference population for the CPI consists of all households living in urban areas in

Rwanda.

The household basket includes 438 products observed in many places spread all over the administrative

centers of all provinces in Rwanda. All kinds of places of observation are selected: shops, markets,

services, etc. More than 25,000 prices are collected every month by enumerators of the National Institute

of Statistics of Rwanda and of the National Bank of Rwanda.

The base year for the CPI is the year 2003.

The weights used for this new index are the result of the Household Living Conditions Survey (EICV)

conducted in 2000-2001 with a sample of 6,450 households.

The splicing with the old index is feasible using the splicing coefficient of 3.889. If you divide the old index

by this coefficient, you will be able to make comparisons with the new index based in 2003.

Additional methodological documentation can be obtained at the National Institute of Statistics of

Rwanda, Economic Statistics Department.
