Datasource:

Demographic and Health Survey

Period:

November, 2014 to June, 2015

The 2014-15 Rwanda Demographic and Health Survey (RDHS5) is the fifth in a series of demographic and health datasources conducted in Rwanda as part of the global Demographic and Health Surveys (DHS) Program, designed to provide up-to-date information on fertility and childhood; mortality levels; fertility preferences; use of family planning methods; maternal and child health; knowledge and attitudes toward HIV/AIDS and other sexually transmitted infections (STI); and prevalence of HIV among the adult population.

These information are essential for making informed policy decisions and for planning, monitoring, and evaluating existing programs related to health in general, and reproductive health in particular, at both the national and regional levels.
