Since 2015, around the celebration of the African Statistics Day (ASD), the National Institute of Statistics of Rwanda (NISR) in collaboration with UNICEF Rwanda organizes the “Reading Data with Children”, an event that brings together around 50 children to be trained in reading statistical reports, especially those related directly to their lives, using children friendly readable visualizations with data from Demographic and Health Survey (DHS) and EICV.

This initiative goes with the Data Revolution as defined by Data Revolution Group as the transformative actions needed to respond to the demands of a complex development agenda and private sector needs, improvements in how data is produced and used; closing data gaps to prevent discrimination; building capacity and data literacy in “small data” and big data analytics; modernizing systems of data collection; liberating data to promote transparency and accountability; and developing new targets and indicators.
