In this report, the majority of tables provide results both for EICV4 and EICV5, and highlight developments over time, as well as discussing different patterns across the provinces in Rwanda and in urban and rural areas. Emphasis has been placed on including disaggregated results for men and women and male- and female-headed households to explore gender-related aspects in key social and economic characteristics of persons and households in Rwanda, and other disaggregation, such as age group, type of habitat, etc, where necessary.
